

INFORMATION FOR DISTRIBUTORS

APRIL 2016

Dear Friends,

The Nuremberg Toy Fair concluded two weeks ago, and as usual, it gave us a glimpse into what awaits us in the next few months. Even though there was the typical gloom and doom talk about the lack of new items, and that the industry is in a downturn, my personal view is that there will be a lot to do in the coming year with no shortage of new photoetched, masks and Brassins to release. With respect to new kit releases, the story is similar, and despite the same talk of not enough new releases and too many clone editions, the fact of the matter is that there are more new releases planned this year than last, and even the kit reboxings that are planned are more than just sentimental heart tuggers. I have no worries about them not able to generate much interest. On the contrary, I think there are some items that will go very quickly. We'll be able to test this out in April, with the release of this year's likely star attraction, the Profipack Bf 109G-6 Late Version in 1/48th scale. The kit, under the catalog number 82111, is being released with boxart produced by Mr. Koike Shigeo, depicting an aircraft flown by Hauptman Friedrich Eberle, CO of III./JG 1. There is a total of five marking options available in this kit. These are a mix of striking and colorful markings, some of which are not generally that well known. All in all, they are aircraft with the lighter canopy variant commonly known as Erlahaube (properly called Volsichtshaube). A part of the offered versions have the classic low rudder, and some the newer taller one. The decals are printed by Eduard, a decision we made for their ease of application and overall quality that we think is not too far off of those printed by Cartograf. The marking options offered and the boxart will no doubt be attractive to modelers, but the plastic is what will set this kit apart. A lot of modelers are anxiously awaiting the results of the revision of the original kit, and the depth of the changes are still largely unknown to most. I am sure that they will all be very welcome. Any assumptions that we shortened the model and left the details alone are erroneous. Compared to the Gustav released two years ago, we are talking a whole new animal, here, with a new and innovative design and with completely new tools. It will be possible to find components that are identical, since most of the small detail parts needed no intervention, but, on the other hand, a long list items were improved upon. We increased the number of alternative parts to accommodate various subtypes which the initial kit didn't take into account. As an example, the aforementioned tall fin is offered in both metal and wooden incarnations with three types of rudders, from which it is possible to easily account for a further two subtypes. The situation is similar with respect to the canopies, and for the current kit, the Volsichtshaube comes in three versions. The biggest changes come with the biggest components, these being the fuselage and wings whose excessive dimensions were the main reason for revising the kit. Besides the overall decrease in the size of the model, we also embarked on a rather complicated improvement on the shape of the fuselage. This concerns small modifications to the tune of tenths of millimetres that at first glance would be very difficult to ascertain, but we feel they will add much to the overall look of the finished product. The wing carries with it one of the main conceptual changes in the kit. The wing tips were separate pieces in the original kit, while here they are moulded integrally with the top wing half. This should aid in ease of assembly of the kit. Also new in this kit are the photoetched brass accessories and masks. Also new for this kit will be other accessory items released for it. Together with the kit release, we are also coming out with five Brassin sets in April, one photoetched set, two alternate seatbelt sets and four mask sets, a set of masks for the spinner spirals and three basic camouflage schemes for individual factories. Releasing kits together with their accessories has become our norm, as you are well aware. This methodology has proven itself recently, and the entire collection of lines work together as a production system, which offers a certain marketing potential. I am confident that it will prove itself in this case as well, and that this time, there will not be a repeat of the lukewarm reception that we saw two years ago.

It is, however, very possible that questions will be asked concerning the possible exchange of the old kit for the new one, whether for the entire kit or certain components. We will not be offering any such exchange. Kit No.82111 Bf 109G-6 Late Version in no way corrects or replaces anything in the original kit, No. 8268 Bf 109G-6. The same will apply to accessory kits. The Bf 109G-6 is not the only interesting item being prepared for release in April. There are two Weekend kits, the nightfighting F6F-5N in 1/72 and a 1/48 Fokker D.VII (OAW). This one deviates a bit from the norm of this line in the way of having two decal sheets covering the lozenge pattern of the fabric surfaces. The two marking options for this model are new and not offered til now. Finally, we have one upgrade edition that deserves a more detailed commentary. Last year, we released a Limited Edition F-104G in 1/48 under the name of Bundesfighter, that sold out extremely quickly. To the contrary, the F-104G NATOfighter still has some 1000 pieces left in our warehouse. We have decided to convert and upgrade the remaining kits with decals and instructions from Bundesfighter under the new heading Bundesfighter/NATOfighter with the catalogue number 1133.

I think that from a successful marketing point of view for April, the Gustav would suffice quite nicely on its own. But, along with the other projects in the works, most notably the upgraded Bundesfighter and the Weekend Fokker D.VII, which, as most of you will know have little in common historically with the Bf 109, the month promises to be quite lively. Don't hesitate, especially with respect to the Bundesfighter, because its numbers are very limited and final. The models are not alone, and the accessory assortment is very wide, as is the usual case, and deserves attention. The Brassins are also not limited to the Bf 109G. For instance, the 1/72 scale UB-16 and UB-32 pods are a response to customer demand, same going for two sets for the F-4J which were originally reserved for the Rockin Rhino Limited Edition release.

The Chinese year of the monkey has begun. Traditionally, this is an unlucky, chaotic and confusing year. Well, we are not Chinese, so hopefully this will all miss us. I wish you all success with our products!
