Dear Friends and Modellers,

Under normal circumstances, today would be the day that I inform you of the goings-on at our press conference at the Nuremberg Toy Fair. But as we all know, the term ‘normal circumstances’ simply doesn’t apply when it comes to our traditional press conference being torn apart by the cancellation of the fair. I must admit to a certain sense of, perhaps, not so much as harm from all this, but a bit of a relief. I don’t even know what the point of the fair to move the fair to the summer months. But even that is a moot point, because if the fair were to be held in the summer, we still would not be in attendance. In the summer, we are expecting to have other pressing matters to attend to. The pandemic situation is still a very dramatic affair, and the vaccination programs are falling behind schedule. This, in such a behemoth endeavor, is to be expected and should surprise no one. I expect the systems in place will be fine-tuned with a new workflow and without the SPACE sets run smoothly. And even more here, in the Czech Republic! And with that, what I am trying to say is that I expect there to be an increasing relaxation of the restrictions through the course of the summer. That first event that modellers will be able to attend, this is the RESA, for the history books!

The new kit releases for February are adversely affected by the fire and its aftermath. It only affects the MIG-21bis in the Weekend Edition has its offer to end, and for P-51D-5 kits bought outside of our e-shop, the offer does not apply. We also have three new LookPlus sets being released, including for the Mi-24V and the Do 17Z in 1:48th scale. In the classic brass range, you’ll find a list of smaller sets, mostly notably of weapon sets. Here, I would also like to single out one item, and that is the set for the Spray Booms in 1:72nd scale for the Z-73A. This is Set No. 672253. This is a set of a window into the future. A part of the set is not in casting, but in direct 3D print. This is a road we’d like to go down, and take full advantage of the potential offered by this technology. Our goal is to produce a good part of resin accessory sets as straight 3D prints by the second half of the year.

Photoetched and mask sets offer several collections of items designed for interesting models that have recently been released, such as the 1:32nd scale Tornado GR.4 (Italeri, 1:32nd), F-104D (Kinetic, 1:48th), II-2 (Zvezda) (1:48th), F-14EJ Kai (Fine Molds, 1:72nd), and the Merkava Mk.2D (Takom, 1:35th). Also, please not the extensive releases of masks and the six new BigEd sets. In February, we also have four new decal sets coming out. These include sheets of stencil data for the P-38 and the Harrier GR.7/9, both in 1:48th scale. The other two sets are classic marking sets covering the Fokker Dr1 in 1:32nd. This is for the MENG kit, originally to be released by WWII. The first sheet is dubbed ‘Die alten Kanonen’, and is dedicated to the aces in general, with the second sheet focused on Breidickers from Richthofens J1, called ‘Flying Circus / J1’.

**FEVERARY NEW RELEASES / KITS**

The new kit releases for February are adversely affected by the fire and its aftermath. It only affects the release of new kits, fortunately. The number of new kits has been reduced to three, and the MIG-21bis in the Weekend Edition has been postponed from the original release plan due to a shortage of plastic. The MIG will likely be released in the second half of the year. For the same reason, there is a postponement of the release of the 1:72nd scale ProfiPACK MIG-21MF Fighter Bomber. So, in the Weekend line, there remains only one release, and that is the Nieuport 17 in 1:72nd. This is, in my opinion, one of the nicest kits we have ever produced which remains, unfortunately, a bit of an outsider in terms of general popularity as a subject. It was created out of some rather unlikely circumstances. We prepared this item in, for us, the record time for the MIG-21, PF and PFIM in 1:72nd, and one is for the P-51D-5 Mustang in 48th. That was the set that was intended for inclusion with Mustang kits purchased in January, and will now happen in February. Because this was part of the process of putting these new items in production for February, it will now figure as a part of the normal release schedule of new items as well. If you intend to take advantage of the offer of these with the kit, then you can simply ignore it as a new item off of our e-shop. I must point out that the offer is only valid from our official dealers, who are responsible for making it available to you, and for P-51D-5 kits bought outside of our e-shop, the offer does not apply. We also have three new LookPlus sets being released, including for the Mi-24V and the Do 17Z in 1:48th scale. In the classic brass range, you’ll find a list of smaller sets, mostly notably of weapon sets. Here, I would also like to single out one item, and that is the set for the Spray Booms in 1:72nd scale for the Z-73A. This is Set No. 672253. This is a set of a window into the future. A part of the set is not in casting, but in direct 3D print. This is a road we’d like to go down, and take full advantage of the potential offered by this technology. Our goal is to produce a good part of resin accessory sets as straight 3D prints by the second half of the year.

**SPRUES, SPRUES, SPRUES**

The retail department was reopened after the fire on January 11th, and resumed operation. It needs to be taken into account that this was done under some very difficult conditions. Just during the first week, residuals water infiltrated down into the restocked warehouse section on three separate occasions. The overall conditions in the warehouse were, and continue to be, somewhat unpleasant. We have had to battle not just that first week, but through all of January, with various little surprises and pitfalls. It came about as the result of everyone dealing with too many things at once, and the sale of ‘clearance’ sets was not our main goal. And how will this affect the production? We are somewhat slow over here. In this situation, what became of the plans to move the fair to the second half of the year? Not just the P-51D-5 Weekend kits, by then down to almost nothing in inventory, were not being replenished, and by the middle of February, only getting ready the ProfiPACK kit of the model, and immediately began selling them on their own. With respect to pressing plastic, we are not alone, and already in January, we have had Special Hobby working closely with us, and more molding equipment has just been added to the mix. Our ability to put such an arrangement into motion (and not only this one) has significantly improved, and in the next few months, we are expecting to have other pressing matters to attend to. That will be one for the history books!
of six months to make the premiere of the movie ‘Flyboys’. Today, the whole thing is really just a vague memory. Really, the movie was not much to write home about, and all of us who know something about aircraft, and their military applications, gazed on the monitor with a certain level of disbelief. Truth be told, despite having a few good things about it, it received a generally failing grade. But come to think of it, the only good thing about the film that I can think of, at the moment, is that it did yield one very nice model. And it gets an arrow's chance to shine as a new Weekend Edition release. Last week, I had a good look at the decal sheet for this kit, and it, in and of itself, is a thing of beauty. We picked out four Frenchmen, and each is a story fit for film on their own. We have Charles Nungesser, Paul Tarascon, Georges Matton, Mathieu Tennant de la Tour. Foreign flown machines, no less well-known or colourful, will be subjects for later releases.

For February, we have the expected Spitfire Mk.IIa in the ProfiPACK line. This boxing is the first of the new graphic design type. Please note, that the ‘brass’ coloured portions of the box represent just that...brass, and not wood. That is not really, apparently, sinking in, and reactions so far have been positive, except that comments about the ‘wood’ fields are leading ‘brass’ 72 to zip. But, we will redouble our efforts and clear this up in favor of the other end. Either way, the change has been well received, something like the new guise of the Weekend Edition boxes. We are grateful for that. The assortment of options for the Spitfire Mk.IIa can be seen in the Gallery. I would like to point out one thing that you would surely miss without a hint. It concerns the background, and the shoreline below the aircraft. Piotr painted the planes over the Normandy shores at Etretat. If you don’t know about this spot, don’t sweat it. Up until recently, I never knew it existed. In the summer of 2019, when no one had any idea that a year later we’d all be running around with masks on like a bunch of bandits, a part of our family and some friends went on a vacation in Norman-dy. During the first week, we stayed at Ouistreham, and I was completely satisfied there. Immediately, I became a regular at the Le Bistrot D-Day (in Ouis-treham, everything carries with it a D-Day reference). The idea that I would rather drag myself two hours one way to stare at some cliffs somewhere named Etretat instead of staying put drinking coffee and then switching over to beer, would not have appealed to me at all. In the end, my loyalty to my family and friends prevailed, and so I tagged along. As it so often is in life, you find great pleasure where you least expect it. Etretat not only put a spell over me with its scenery and atmosphere, but the story that I came across at the top of that hill. Or, at least, it reminded me of the story. There is a memorial there dedicated to Nungesser and Coli, because this was the last place where their aircraft, L’Oiseau Blanc, had been seen during their now-famous, tragic and secret flight from Paris to New York. From the moment I saw the memorial, Charles Nungesser has captured my imagination. It’s not that I hadn’t heard of him before, but I took him as one of many flyers, one of many aces of the Great War, and I never thought much more about the matter. That shouldn’t be taken as disrespect to heroes; it’s just the way that it is. There are many flyers that have attained hero status. But, once I dove into his wartime and postwar exploits, and uncovered many mysterious facts and secrets connected with his disappearance, I began to realize that this individual was one helluva a badass. Even back when we were coming out with our 1:48th scale ProfiPACK Nieuport 11, I wanted to write an article about the man, but other things just kept getting in the way, and I never got around to it. Around the middle of January, as my brain was firing on all cylinders from all the previous activity, I figured I would take the weekend and put it all aside, and as a sort of therapy, I would write an essay about Nungesser. I didn’t write much, because I got stuck right on the story of his first wartime adventure. I was so suspicious of its truthfulness that I began to research the matter in greater detail, and that’s what I am still doing now. However, my reward has been a gaining of insight into the histories of Mors and Citroen, and the mounted regiments of the German Imperial Army. And that, I am sure you will understand, is well worth it! So, at the moment, I don’t have an article. You may be wondering why I am explaining all this, and the reason is that there is an interesting, if unlikely, connection between the Spitfire (and its boxart), the Nieuport, and the town of Etretat. The third February release amongst its ‘Kampfs-tift’, which is the Do 17Z, based around the ICM kit, in the Limited Edition line. This also has a connection to the Spitfire, just as the Bf 109E and the Bf 110C/D in the Adlerangriff and Adlertag kits did before, as Spitfire foes. Contrary to the Bf 109E and Bf 110C/D kits, we expanded the decal options in this kit to cover a wider time span, approximately from the end of 1939 to the winter of 1942. That covers the beginning of the war, the invasion of Poland, the Battle of France and Britain, the Balkans conflict, North Africa, across the Soviet planes and into Finland. It’s a sort of a ‘Tour de Europe 1939-1942’.

HISTORICAL ARTICLES

There are two articles to go along with the Do 17. The first is written by Jan Bobek, and is dedicated to the fate of the crew of Do 17Z 7T+HH from KG 60. It is included in this newsletter, and believe me when I tell you that it is some story, where the commander of a Dornier becomes the commander of a submarine. First, he was sunk by the British, and the second time around, the Americans tried to send him to the bottom. Then, the British tried again. Ultimately, it was the French that got him. At Dakar.

The second, no less interesting article, is a study of the Do 17Z from Mira Baric and will come out in the March issue, and will be dedicated to the aircraft coded SK+AR from 7/KG 3. The article will describe the only known, if not the most difficult to belief, flight of this aircraft, but also the story around the discovery and salvage of its wreck and subsequent restoration. This literary works are the base of our otherwise a little uneventful advertising material and also are one of the reasons why our newsletters are, and have been for quite some time now, a much anti-cipated event among modellers. In this newsletter, there are three such articles. Besides the afore-mentioned articles, there’s an article by Jan Zdzieb- sky about Lt. Col. John C. Meyer and a borrowed Mustang named ‘Stardust’, with which Meyer had the most successful day of his combat career. The fact that the date of the events was September 11th, 1944, will not surprise anyone familiar with Jan’s field of interest, and just serves to confirm the importance of that date, a date that was made possible by some very extraordinary men. Besides focusing on Lt. Col. Meyer, the article describes a day in the life of the 352nd FG and the missions of the 8th USAAF.

The third article was written by Richard Plos. It’s also a description of an event that, if it got into the hands of a film script writer, it would be rejected on the basis that it is too difficult to believe. Although, getting back to the movie ‘Flyboys’, it could easily also be the other way around. The article describes the story of German fighter ace Willi Gabriel and has a connection with not just two of our kits, but also to historical research surrounding the German fighter force during World War One. The two kits in question are the 72nd scale Limited Edition kit Fokker Fokker! released this year in January and the 48th scale ProfiPACK kit of the Fokker DVIII (Fokker). Fokker! Is one of the kits that survived the blaze and is available through to now. And even that suggests something about the type in and of itself!

And that’s it from me for now. I hope you find some inspiration within the pages of the historical articles, and that you find the rest of the information worthy of a close look.

Happy Modelling!

Vladimir Sulc.
Although the name Willi Gabriel does not figure as a part of the shortlist of the most famous fighter aces of the Great War, his spectacularly decorated Fokker D.VII keeps him in the "lights" and general awareness. The aircraft with blue and orange stripes on the fuselage and elevator is still popular with plastic model producers, artists or even with flying replicas builders. For example, the replica built in 2010 by Engels Aeroplanbau for the TVAL company (founded by Peter Jackson) runs across the New Zealand’s skies in Gabriel’s marking and back in the time, the replica built by famous Cole Palen was performing spectacularly during Aviation Days at Old Rhinebeck Aerodrome (USA) in 1960’s. Willi Gabriel’s pilot escapades are no less interesting and colourful than his mount. He was through periods of good fortune, as well as painful losses in his life and he also credited himself with one quite important credit.

**Flying brothers**

At the time, the territory of Poland was part of Prussia, the Bromberg town was what is known as Bydgoszcz today. There, at the very end of the 1893 (December 31), twin brothers Willi and Walter were born in the family of the furniture manufacturer Eduard Gabriel. The two guys were very close each other for most of their lives. Not only because of their relationship, but also thanks to shared interests. As high school students, they liked to drill into various machines, especially in internal combustion engines. Both have learned to drive very early as well, starting with motor racing once they managed to acquire their own car. Also, aviation was drawing attention of technically and adventurously minded young men.

As they had enough wood, glue, and tools on hand thanks to father's factory, the desire to build their own aircraft was no surprise. At the age of eighteen, Gabriels started to build their own replica of Blériot based on plans in Flugsport magazine. Brothers managed to finish the plane, but it never flew, as no suitable engine was available to them. Therefore, they tried their luck with their own design, but it did not turn out any better. They have felt more aircraft design information would be helpful, so they made a trip to Johannisthal, where Fokker Spin caught their attention. Upon return home, they have bought an Anzani aircraft engine developing some 30 hp and began to build a replica of the Fokker’s successful design. They also invented some improvements, and on August 16, 1912, Walter took off for the first short hop. After that, both brothers continued to hone their piloting skills, as well as the aircraft’s design. Thanks to their efforts and commitment, both became good pilots, albeit without an official pilot's license as it was quite expensive for them to invite representatives of the Deutschland Aero Club from Berlin for examinations. Willi later admitted, his brother was initially better pilot than him.

**HISTORY**

**THE FLYING ELEMENT**

**WILLI GABRIEL**

Eleven aerial victories would hardly put Willi Gabriel to the pedestal of the Great War fighter aces. This achievement makes him just something like a “second rate“ in the first sight, but it must not be forgotten his fighter career was quite short. It lasted just some four months...
They were also constantly repairing and improving their aircraft, with the old Anzani engine being the biggest problem. Maybe that's why they tried to build gliders as well. Information about this is sporadic, they were supposed to be four designs called Gabriel P-I to P-IV and probably built during 1913.

From West to East and back
The outbreak of the World War I thwarted plans of many people. Gabriel brothers were no exception, as they were called for military service. Their pre-war aviation activities were no secret for the military authorities, so they were assigned to the German Air Troops (Fliegertruppen). Both brothers completed basic military pilot training at the Aviation Training Unit No. 1 (Flieger Ersatz Abteilung 1) in Döberitz, followed by advanced training in Müncheberg at the Rumpler training centre.

The twins were lucky, as they were assigned to the same FFA 34 (Feldflieger-Abteilung) unit after the training completion. The unit was operating from the Cunel base near Verdun, and commanded by Hauptmann (Captain) Hugo Geyer. Pilots flew their missions with unarmed two-seaters Aviatik B.I and B.II. The unit stayed defenceless in the air until the mid-1915, when Aviatik C.I and Albatros C.I with a defensive machine gun operated by observer arrived. In the spring of 1916, both brothers packed their bags and set out on a long journey, as they were transferred to FFA 21, the unit operating on the Eastern Front in the area of Białystok. There they experienced quite different missions to what they were accustomed to on the western side of the conflict. Pilots flew quite a long observation flights there with their Albatros C.Is, penetrating the enemy territory much deeper than it was usual on the Western Front. Such a practice was possible thanks to low threat from Russian fighters. Flights of up to 100 km deep in enemy territory were commonly used to map the situation and traffic on the main railway lines. During each flight, about 93mi (150 km) of the railway was observed, so total length of the mission was about 350 km. Brothers joined the operations of the unit, but, after some time, their ways parted, because Willi was transferred to FFA 44 operating on the Western Front in the Verdun area.

New engagement with Schutzstaffel 15
During their service with FFA 34 Gabriel brothers had been witnessing arrival of first Fokker Eindeckers and both were attracted by these aircraft with Walter being initially more captivated than Willi. So it was no wonder he applied for transition to one of the Kampfeinsitzer Komando (one-seaters fighting group). His desire materialised only after he has returned to the western area of the war in the spring of 1917. He was assigned to the Jasta 19 (the KEKs were gradually converted to the Jagdstaffeln about this time), but his spell with fighters was quite short as he reported to the commander of Flieger-Abteilung (Artillerie) 250 (Artillery-observing aviation unit) shortly afterwards. There he flew long-range reconnaissance flights with Rumpler C.IV capitalising on his Eastern Front experience.

Willi was in a similar situation, flying at FA (A) 207 at the time. But, as the more dynamic and impulsive person of them both, he was gradually getting more and more bored with the monotonous observation flights. When the Schutzstaffeln (protective squadrons) began to form in 1917 as the protection force of the observation aircraft, he did not waver to request reassignment. His request was approved and Willi became part of the Schusta 15, flying Halberstadt C.L.IIs. These successful airplanes were armed with two machine guns (one moveable for rear gunner and one forward firing synchronized one) and performed tasks focused primarily on the protection of observation planes. Although not thoroughbred pursuit aircraft, the C.L.II offered Willi significant and more combat opportunities. He was a scorcher, always on a mission, despite number of combats. Instead, he learned, that his brother had not returned from a flight over England in August 1917. The Britons reported downing of the Rumpler C.VII flying at an altitude of about 18,000 ft (5,500 m) that day. According to the report, the hit of anti-aircraft fire destroyed the tail of the aircraft, causing it to fall in spiral and crash. Willi was downcast with the news as he had no hopes his brother might survive. What a relief for him, when a British plane dropped a mail bag over German territory with an up-to-date list of prisoners of war and the name Walter Gabriel was there!

Fighter pilot made “easily”
At the beginning of 1918, the protection of observation aircraft was already fully provided by Jagdstaffeln (fighter squadrons), while Schutzstaffeln were increasingly used for ground attack tasks. Therefore, their designation was changed to Schlachtstaffel, abbreviated Schlasta (attack squadron). At this time Willi already had a reputation for being an extremely aggressive fighter, frightening not only the enemy but also his own gunners with violent manoeuvres. It was more and more evident, the fighter instincts were inherent to Willi’s personality. But, despite his undeniable piloting skills and courage, there were still zero kills on his account. He had to wait until March 22, 1918. The story was similar, as he finally scored his first kill, the RE-8 of SPA 14, which he brought down near Albert Longuenesse. It was one of the most experienced pilots of two-seaters, he had a number of fights on his account and he also had problems finding a permanent gunner; as each of them preferred to fly with anybody but him. He therefore took advantage of situation, when his unit shared the air base at Cappy with the entire Jagdschwader I (Fighter Wing No. 1). He went on his own to the tents on the other side of the airfield and asked for a hearing directly with Manfred von Richthofen, leader of Jag J I. Famous ace heard the Schlasta pilot out, and since he had heard already about him, he agreed to request for his transfer to Jag J I. Gabriel informed his commanding officer subsequently about his visit at Jag J I. He did it, but it was a mistake. His commandant felt like he should not loose him and so he sent a “counter-request” to the headquarters to keep Gabriel with Schlasta 15. Therefore Willi’s first attempt to become fighter pilot failed. Instead, he earned the Iron Cross of the 1st degree, which he received in March 1918 for his bravery and achievements. After von Richthofen’s death, Wilhelm Reinhard took command of Jag J I and Gabriel decided to repeat his attempt. The story was similar, Reinhard agreed to his transfer as well. And as Gabriel’s commandant have given up further efforts to keep him with the unit, Willi reported himself with the Jag J I leader on May 19, 1918, becoming a member of the famous Jasta 11. However, he had not won yet.

Reinhard’s ultimatum
Reinhard made it clear to Gabriel during the first report, that he knew of his piloting skills, but his unit was no place for training newcomers or resting on laurels. That said, Willi had been tasked to achieve at least one victory in the next four weeks. If case of fail, he would return to where he came from. It was quite hard requirement, given that Gabriel had not flown single-seat fighters and had not undergone fighter training until then. He therefore did not waste time, conducted two training flights with the Dr.I to familiarise himself with the nimble fighter powered by rotary engine and asked Reinhard for the place in the evening patrol the same day he had joined the Jag J I. Reinhard agreed on condition the newcomer would stay close to him, turning tail in the event of a clash with the enemy. Well, that was not what Willi had in mind! When the patrol encountered a formation of DH-9 bombers before eight o’clock in the evening, Reinhard began to climb and manoeuvre to get the best position for his men to attack. For all bar Gabriel, who separated from the formation attacking the rearmost DH-9, shooting it down. Delighted at his success, he spiralled with his prey watching it to hit the ground and
Jagdgeschwader I was an elite unit under command of famous Manfred von Richthofen. After his death on April 21, 1918, Reinhard respected the legacy of the “Red Baron” and led the unit in similar way as von Richthofen did, giving his pilots relatively large degree of freedom, including the possibility to fly “free hunts.” That was a blessing for the indomitable Gabriel, as independent flights suited him much more than disciplined group operations. But the “free hunts” were also dangerous adventures, as Willi learned soon.

He took off for lone hunt on June 13, hoping to achieve his fifth victory, which would grant him the status of an ace. After spotting formation of Spads, he sneaked up behind and gave the rearmost plane of the formation burst of his machine guns. The victim fell and remaining eight enemy pilots pounced on him wildly. Gabriel not only had to use all his strength and skill, but also had to hope for luck. He zigzagged at the height of the treetops, while number of hits increased, luckily with no bullet hitting him or anything important on the plane. The hope of getting out of the mess was diminishing, but then one of the pilots of overflying formation of Jasta 41 Albatroses spotted his “dance of death” and rushed to help. All but one of the Spad pilots decided to call it a day than and Gabriel managed to shoot down the importunate opponent. The Spad pilot made an emergency landing at the German territory and Willi together with his saviour headed to the base. After landing, Willi found it was Josef Schwendemann, who, like Gabriel, had four victories on his account so far. Grateful for his rescue, Willi offered one of his two victories of the day to Schwendemann and adjusted his report accordingly. Both pilots became aces that day.1

Involuntary renunciation

Leaving one victory to another pilot was not anything new to Gabriel, but it was for the first time he did so voluntarily. He has been “forced” to do it not once, but two times before. The day before his abovementioned flight he claimed the same victory as Reinhard. It would be twentieth victory for his commander, meaning he would reach the limit for the Pour le Mérite award. In rather unusual manner adjutant of JG I, Lieutenant Bodenschatz, approached Gabriel with request to waive his claim. But Gabriel refused, because a few days earlier he had been dealing with the same situation occurring with another pilot. In that case he agreed on condition he would be awarded the next disputed victory.2 More to it, in the case of the dispute with Reinhard, Gabriel was striving for his fifth victory, and thus the ace status. No wonder he insisted on the victory. However, Reinhard was scheduled to test the new Zeppelin-Lindau D.I fighter at Adlershof Airport near Berlin in a few days and would like to leave his unit with the valuable award virtually “in his pocket”. Bodenschatz therefore asked Gabriel again and offered that not one, but two subsequent disputed victories would be automatically awarded to Gabriel. Considering it fair, Willi finally agreed. No one could have guessed that there would be no more disputes with Reinhard...

During the tests at Adlershof on July 3, Hermann Göring tried out the new type first, followed by Reinhard. During the dive one of the wing struts tore off and Reinhard was killed in the subsequent crash.3 Gabriel recorded his seventh victory three days before Reinhard’s death. His victim was Sopwith Dolphin, and it was a special event, as it was also the 300th victory of Jasta 11. Willi therefore went to celebrate with his old comrades-in-arms from Schlachta 15, using his new D.VII F for the trip. It was BMW IIIa powered aircraft and so very valuable, as it was more powerful and better performing than Daimler-powered ones.

The party at Schlachta 15 was a bit longer, than expected. Because it was a clear and “light” summer night, Gabriel decided to fly back home shortly after midnight, but from the air the ground looked much darker, and he

when he “awakened” and looked back and over he saw the rest of the squadron circling above him. If it were not his comrades defended him, he would be done, as the French Spads were above the German patrol to protect the bombers... However, he achieved his mandatory victory on the first day at the JG I and so he could unpack definitely...

Two aces by one combat

Willi didn’t do much flying with Triplane, as Jasta 11 replaced these aircraft with new Fokker D.VIIs during the second half of May. One of them, the example of the early production from the Schwerin factory, was assigned to Gabriel. It was a well-known 286/18 with a Mercedes D.IIIa engine. This aircraft got the marking of the unit (red nose) and personal marking, consisting of orange and light blue stripes on the fuselage and elevator added gradually.

Fokker D.VII Early, 286/18, Vzfw. Willi Gabriel, Jasta 11, Cappy, France, May 1918
found no airport after more than an hour of flying. Willi eventually landed on a pasture near Valenciennes, but the chassis struck the fence, the aircraft lost its lower wing therefore and finally ended up with its tail pointing helplessly to the sky.

The warning

After Reinhard’s death, the JG I was without lead again, and the pick of the headquarters for the position was probably the worst possible choice from Gabriel’s point of view. To the great disappointment of the JG I pilots, none of their ranks was chosen to command the unit. Experienced pilots in officer ranks, such as Udet or Loewenhardt, were not professional officers and so disqualified to lead such a large unit as the Jagdgeschwader was. It had to be a professional soldier. Somebody like Hermann Göring, then commander of Jasta 27 and an ace with 21 victories... Immediately after his arrival on July 14, he gathered all the pilots and informed them about the changes that would take place under his leadership. He asked for better discipline and morale in the air with commanders of the formations giving the signal to attack with a row and sports complete paintwork with orange fuselage stripes.

After Reinhard’s death, the JG I was without lead again, and the pick of the headquarters for the position was probably the worst possible choice from Gabriel’s point of view. To the great disappointment of the JG I pilots, none of their ranks was chosen to command the unit. Experienced pilots in officer ranks, such as Udet or Loewenhardt, were not professional officers and so disqualified to lead such a large unit as the Jagdgeschwader was. It had to be a professional soldier. Somebody like Hermann Göring, then commander of Jasta 27 and an ace with 21 victories... Immediately after his arrival on July 14, he gathered all the pilots and informed them about the changes that would take place under his leadership. He asked for better discipline and morale in the air with commanders of the formations giving the signal to attack with a signal pistol. The most important change was quite painful, as it was forbidden to carry out “lone hunts” with immediate effect. Most of the members of JG I did not like the new order, most of them also hoped that it was just a kind of mandatory process for Göring to demonstrate his determination, and soon everything would return to the old tracks. But they were mistaken...

On July 18, Willi took part in formation led by Göring. The flight did not last long, and although there was a combat with the French Spad squad, none of the pilots, according to Gabriel, achieved any victory.

As the Fokker formation approached the home base, Gabriel felt there is still “something in the air” for him. He had still enough fuel, so he left the formation and headed back to the front. Soon he spotted another Spad formation, approached from behind and pounced up for the rearmost one. The victim went down, and the situation already described repeated, as eight Spads were hunting lone Gabriel again. Willi had to manoeuvre furiously to save his life, but he managed to shoot down another Spad and the rest eventually gave up the fight, thus pleasing sweaty Gabriel. Approaching the base at Beugneux, already on the landing finale, he noticed three Breguet bombers overflying at an altitude of about 10 000 ft (3050 m), heading for Neully. He did not hesitate, opened the throttle of the BMW engine, pulled his Fokker into climb, and headed towards the enemy formation. He also noticed another D.VII climbing, with Richard Wenzl of Jasta 6 in the cockpit. Flying D.VII with more powerful BMW engine compared to Wenzl’s Daimler version, Willi outclimbed him easily and set for attack. He ran in and fired on the starboard Breguet repeatedly. When closing in for the third time, he noticed both pilot and observer collapsed in the cockpit and after another burst also the engine stopped. Gabriel ran out of ammo, but Breguet was done and went into a spiral, hitting the ground a mile away from the airport. He was receiving congratulations from his comrades after landing, but Wenzl saw the situation differently: "We cut off a French bombing squadron that was approaching Neully, intending to bomb Fère en Tardenois. I cut one of them out and really went to work hard on him. At first the observer was still firing, but then he was quiet. He´d had enough. My opponent crossed the lines, stinking and smoking, with his engine shot in pieces. I was convinced, he was done. I broke off and watched the outcome of the operation. One of my comrades (Gabriel) suddenly thought that he should intervene and pumped another series of rounds into the Breguet, which didn’t even moved but continued quietly on. It went into the ground near Igy and burned. When we got back, I got involved rather undiplomatically in throwing the dice into it - and lost my victory, naturally." For Gabriel there was a bigger problem waiting than dispute with Wenzl, as he had to hear annoyed Göring out. The JG I commander clearly expressed his thoughts and warned him, that anything like going off on his own must not happen again. Göring then asked him to confirm his victory over the Spad, but Gabriel refused because he did not observe any combat between Göring and French airplane. He certainly did not improve his situation by this...

Too “expensive” trip

An afternoon patrol followed the same day and Willi, who thought the best way to prove Göring is wrong on banning pilots from the lone hunts, went off on his own again. Leaving the formation, he overflew the front at very low altitude to avoid the British anti-aircraft “Archies” and spotted a two-seater (probably Spad XVI) guarded by two Spad fighters. Willi concentrated on the two-seater, as observer was firing at the trenches, losing his vigilance a bit. Gabriel sent his victim down by first burst, frightening probably the escort fighters, as they turned sharply and disappeared in the haze.

After landing, Gabriel met furious Göring, for whom four victories Willi had achieved that day were no excuse for disobeying the rules. He ordered him four weeks leave to get rid of him, at least for a while. Before departure,
The consequence of the night flight home from the celebration. The aircraft was damaged badly, but the valuable BMW engine stayed unharmed.

Gabriel was ordered to deliver an Albatros D.Va to the airport in Metz, where the air assembly base (Flugpark) was located. During the flight, however, Willi decided that as he is already on vacation, he could fly it all the way home. And home meant some 620 miles (1000 km) of distance to Bromberg! He had to make several landings en-route to fill the fuel tank but, surprisingly, nobody asked him for a flight authorisation. His affiliation with the famous JG I was a sufficient "authorisation" for everyone, except for the commander of the base in the Bromberg, who did not let himself be outwitted. Whole the matter was getting through the official military channels and the final blame was on Göring. As soon as Gabriel returned to the unit, he was informed by his angry commander, there was no place for somebody like him. Gabriel was sent him to the Army Flug Park II in Montmédy, where he was tasked with test-flying the airplanes assembled after rail transport to the front. As he said later, after serving with the elite Jasta 11, he no longer wanted to join any other unit, so he endured the war there and returned home immediately after armistice.

Home again

Returning home, he found his hometown changed the name. It was no longer Bromberg, but Bydgoszcz, as Gabriel’s birthplace became part of the new Poland. German citizens could stay, but on condition they accept Polish names. And so, Willi became Jan and Walter, who returned from the captivity, became Pawel… But the change was only an eye candy to satisfy the Polish authorities. To the advantage of the aviation-bound brothers, there was no ban on aircraft production in Poland, as was the case in post-war Germany. And, although the brothers joined the family furniture company (later took over its future shape, officially introduced to the world in 1935. Number of "old hands" were recalled for military reserve pilot training and Willi arrived at Döberitz Airport, where he flew He-51s. During the course, which also included air-to-ground firing, interesting offer emerged for him. At the time, Ernst Udet was performing popular performances on air shows called the “Flying Professor”. As his new duties with the Luftwaffe prevented him to carry on, he remembered Willi, who was more than keen to take over the famous Ernst Udet was performing popular performances on air shows called the “Flying Professor”. trained 800 pilots during his instructor career, and, at the end of the war, 52-year-old Willi even flew the Ju 88 and Me 210 night fighters. It is interesting that Gabriel came into conflict with the authorities including the SS several times during the war years. The reason was not ideological, but rather materialistic, as he reportedly sent several Ju-52s to Germany with unspecified contraband. It was very close several times and even the mighty Hermann Göring himself had to save Willi from bigger troubles. Yes, it was the same Göring who fired him from JG 1, and who didn’t get to like him any more later. But the unwritten law of the old guard of JG I ordered them to keep together and was superior to everything else. Göring may have also intervened earlier, in 1936, when Willi was accused of attack on the state and the party. The accusation was based on denunciation from four of his colleagues and the reason was supposed to be an unspecified conversation about Leni Riefenstahl and her relationship with Adolf Hitler.

At the end of second world war, Willi Gabriel fell into British captivity, and the Britons asked him for help with the training of RAF pilots to convert on captured German aircraft. Willi refused this “honor” and so he was released on August 25, 1945. He returned home to Berlin but only to mourn. His brother Walter died during the Russian shelling of Genthin, where he escaped from his native Bromberg to avoid the progressing Red Army. Even worse loss for Willi was the death of his son Manfred. He shot himself in Berlin in front of approaching Russian soldiers on May 1, 1945. His body was found on Gasteiner strasse. Two weeks later, Manfred would turn 19. By the way, the guy was able to fly with the aircraft at the age of twelve…

Valuable helper
Shortly after returning home, Willi volunteered as a pilot for the air bridge supplying West Berlin, but his offer was turned down. Luftwaffe pilots were not sought after… Coincidentally, he met someone who was flying the air bridge, the British pilot Alex Imrie, who became one of the founders of post-war aerial research focused on the First World War. Willi and Alex became friends, and, as Bruno Schmälzing writes in his book Jasta Colors, Willi was so close friend, Alex invited him to his wedding. In 1962, Cross & Cockade magazine published an extensive article, which Alex wrote based on Willi’s narration. This article also draws on it. Willi Gabriel opened many doors to Alex in his efforts to contact former German First World War pilots, helping to preserve valuable information, photographs, and documents. After the imperial military archive in Potsdam was destroyed during one of the bombing raids, private albums and memories were the only thing left… Alex Imrie then passed on his knowledge and
contacts to a new generation of researchers like Bruno Schmäling, Greg Van Wyngarden or Eduard’s collaborator Jörn Leckscheid.

Getting old, Willi gladly accepted invitations to various commemorative events. As long as it was possible, occasional meetings of former members of JG I were organized, but the meetings of Alte Adler (The Old Eagle) were more frequent. This organization was founded in 1927 and after World War II, it brought together only notable people who worked in aviation before 1919. Now, of course, this rule is already gone, and membership is decided by the executive committee.

At a meeting of JG I members in 1960 in Braunschwig, Willi managed to get the seat of the co-pilot of the Beechcraft Twin Bonanza and was given chance to pilot it. According to witnesses, he did such a violent flying that his former colleagues, who were riding as passengers, got sick!

Willi Gabriel was an impulsive, uncontrollable “element” who did not have too much understanding for tough discipline. He was an individualist and, according to witnesses, also entertaining companion. He died on July 1, 1968 at the age of 75. It would be interesting to find out how many victories he would eventually achieve if he was allowed to fly his solo missions. And who knows if he would survive another fight of one against eight, which he might get into again. Maybe Göring saved his life when he fired him from the JG I...

Notes

1) Many sources state that Gabriel did not achieve his first victory until a month after his arrival at Jasta 11, and so he did not meet Reinhard’s original deadline. This mistake is due to the erroneous dating of Gabriel’s arrival at Jasta 15 on April 15. However, the “Red Baron” died on April 21, and Reinhard took command of JG I on April 25.

2) Josef Schwendemann achieved a total of seventeen victories.

3) Disputes over victories were nothing special. Concurrent claims occurred relatively frequently. In the fierce air battles in a relatively small area, several pilots often fired at one target and it was not easy to determine whose shot was the fateful in the end. It was mostly up to who secured a better testimony.

4) The motif of Reinhard’s fatal crash during rehearsals of a new type appeared in a modified form in the movies Pour le Mérite from 1938 and also in the better-known The Blue Max (1966).

5) Richthofen’s Circus; Hunting Squadron I; Greg VanWyngarden, Osprey Publishing Limited 2004

6) The Gabriel brothers also designed P-VI (two-seater biplane training aircraft), P-VII (sports two-seater parasol aircraft) and sporting aircraft P-VIII. The P-IX project remained only on paper, and none of the projects was produced.

7) The Mehli Gabriel factory was nationalized on August 16, 1950 by order of the Council of Ministers. It was located at Aleja 1 Maj 138, Bydgoszcz.

8) Gabriel brothers named their sons after von Richthofen brothers. Walter’s son was Lothar, Willi’s was Manfred.

9) Alex Imrie; April 29, 1926 - June 4, 2011

Registers of the Berlin and Bydgoszcz

Author would like to thank to Greg VanWyngarden for providing the valuable photos and additional informations.

Willi looks quite tired on the photography taken during the WWII years...

Register entry of the death of Willi’s son Manfred.
The first volume in a landmark series of the Great War aviation books with detailed markings of German fighter planes is out!

The first volume of a series of books dealing with the colours of German WW I fighter aeroplanes offers an insight into the research process of looking for the true colours of the Fliegertruppe fighter aircraft.

A detailed presentation covering the author’s long term research, conducted mainly in the 1970s and 80s, sheds light on the process of uncovering long lost documentation revealing the true colours of the aircraft and recounting the adventures of their pilots. The book contains 58 colour profiles, many of these not seen before, while others correct previous misinterpretations of markings. Moreover, some 223 photographs and 61 reproductions of documents are published here.

Renowned historian and author Bruno Schmälzing completed this book with the cooperation of fellow researcher Jörn Leckscheid, a long-time friend of Eduard.

The book has been published by Aeronaut Books (USA) and is available worldwide from the Amazon.com and its local representations.

More about publisher at: www.aeronautbooks.com
We have made references to the date of September 11th, 1944, several times now within the pages of our Eduard newsletter.

It’s not only thanks to the obsession with the date that is held by the author, but also the fact that this date holds many diverse and fascinating aspects that are attached to it. The recounted stories that have been documented here have thus far been tied to the specific conflict between the 13th Combat Wing, notably the 100th Bomb Group, and Jagdgeschwader 4, that has come to be known as the Air Battle over the Ore Mountains.

This time around, we’ll take another gander at about the same time window – approximately 1145h to 1215h – but about 250km further to the west. The centre of interest will continue to be the stream of bombers from the 3rd Bomb Division, but we will move from its leading edge, specifically the first three combat boxes headed towards Hyrierwerke Brabag in Ruhland, and shift our attention to the rear of the bomber group, to its fighter escort. The next to last grouping of the 3rd Bomb Division stream was a pair of combat boxes from the 490th and 493rd Bomb Group heading towards the Sudetenlandische Treibstoffwerke AG Brux (this is currently a major chemical production facility called Zaluzi just outside of Most in the northwestern part of the Czech Republic and is visible from the main Eduard building in Obrnice. It is also firmly connected to the history of the company.) Two boxes designated 93A and 93B Combat Wing, located in positions 7 and 8 within the 3rd Bomb Division formation, were under the protection of the 352nd Fighter Group, commanded by Lt. Col. James D. Mayden. The bomber protection duties included close air support as well as clearing the air en route for the bombers as withdrawal support.

The 352nd Fighter Group was composed of three squadrons – the 328th (that day led by Lt. Col. Meyden), the 486th (Capt. Franklyn N. Greene), and the 487th (Lt.Col. John C. Meyer). Each squadron for this mission consisted of sixteen to eighteen fighters and was divided into White, Blue, Red and Yellow Flights, where each flight was made up of four aircraft.

By the time all three squadrons of the 352nd FG and their 53 Mustangs formed up and turned eastwards Commanding Officer of 487th FS Lt.Col. John C. Meyer in the cockpit of P-51D ‘Petie 2nd’, s/n 44-14151 at Bodney, Great Britain.

Each squadron for this mission consisted of sixteen to eighteen fighters and was divided into White, Blue, Red and Yellow Flights, where each flight was made up of four aircraft.

By the time all three squadrons of the 352nd FG and their 53 Mustangs formed up and turned eastwards
around 1000h, their charges had been in the air and over enemy territory for some time. Despite each squadron operating independently, their rendezvous with the bombers at the designated location was almost simultaneous. The group with the call sign ‘Balance One Four’ was to come in from the North Sea, over Holland and the Ruhr to the area south of Hanover and from there continue on southeasterly towards Plauen, where they were to meet up with their ‘big brothers’. Although the assumption was that meeting the Luftwaffe was unlikely, the route to meeting the bombers was several times interrupted. The first encounter with the enemy occurred at around 1130h when the 328th FS stumbled upon a fight in progress between the 4th FG and German fighters. Although subsequent reports put this event at 20 miles east of Meiningen, it was in all likelihood actually in the area of Eisenach, over 50km away. The engagement proved successful especially for Blue Flight of this squadron, with its CO Capt. William E. Hendrian and his Number 2, Lt. Richard F. Semon, each claiming an Fw 190. However, this came at the cost of the unit’s Number 3 man, Lt. Garland Rayborn, who was shot down and taken prisoner. The bad guys in this fight, which lasted over a half an hour, were Bf 109s and Fw 190s from I./JG 76, JGr. 10, II./JG 27, and II.(Sturm)/JG 300. Besides the aforementioned 352nd and 4th Fighter Groups, the American side also included the 359th and 364th FG.

 Shortly after that, at around 1150h, and further to the north near Gottingen - Nordhausen - Mulhausen, pilots of the 328th FS, dubbed ‘Meyer’s Maulers’ spotted a group of around thirty German fighters forming up. These were, no doubt, connected to the German units taking part in the battle described immediately above and located about halfway between them and an unspecified group of American bombers. The latter were most likely B-17s from the 1st Bomb Division headed for Merseburg/Lutzkendof. The squadron leader, Lt. Col. John C. Meyer, later reported: ‘They were pulling contrails and appeared to be forming up. We headed towards them and as we got closer they dove out of contrails level in ones and twos. Contrail level was 28000’ plus. At 29000’, I identified them as Me 109s and attacked one as he headed down in a 60° dive. The whole squadron then engaged small groups of the E/A after their original gaggle had been split up. At about 17000’ the E/A I was chasing leveled off and I closed rapidly. He saw me and started in a steep climbing turn, my first burst was about 20° deflection at 300 yards. I observed few hits. I closed on him in the climbing turn and at 30° deflection and 200 yards I got hits on the rear portion of his fuselage, pieces coming off. He split S’d, recovered and turned into me. I had little difficulty in overtaking and in turning inside of him. At 20° and 300 yards I got good strikes on wing root and E/A started to smoke. It rolled over and crashed straight into the deck from 8000’. Pilot seemed inexperienced, his breaks were conspicuously non-violent. He was hesitant in all his maneuvers.’

 John C. Meyer did not get the described kill while in the cockpit of his iconic Mustang s/n 44-14151 HO-M, named ‘Petie 2nd’, which remained on the ground. Good fortune on this day was bestowed on Meyer by a borrowed, and a little orphaned, Mustang named ‘Stardust’, which carried the serial 44-13597 and code HO-F, who’s pilot, Lt. William E. Fowler, had just completed a combat tour.

**Sudetenländische Treibstoffwerke AG Brüx, September 11th, 1944, was the target for the 93rd Combat Wing (490th and 493rd Bomb Group) with fighter escort provided by the 352nd Fighter Group.**

After getting that first kill of the day, Lt. Col. Meyer felt a little abandoned. He spotted another group of German fighters, made up of around fifteen Bf 109s and Fw 190s, a little higher than himself in altitude and further to the northwest. He climbed about 2,000 feet above the level of his foes and attacked a mixed pair of aircraft, one of each type: ‘They had belly tanks and appeared to be forming up. I approached them from out of the sun and attacked the #2 of a pair of E/A that were farthest from the mass. I fired at 15° deflection from 300 yards to point blank range. The E/A burst into flames, I broke into the sun, cleared my tail and attacked the element leader, at 300 yards I got few strikes on his right wing tip and he broke. As he broke I got strikes in the vicinity of the cockpit and wing roots. The E/A rolled over and spiraled down, crashing into the ground.’

Shortly afterwards, Meyer spotted his final victim of this fight: ‘A lone Me 109 was emerging from a cloud in the vicinity of the large enemy gaggle. And as I was not yet under attack, I attacked the E/A. Only my right wing guns were now firing so I opened at 200 yards and no deflection closing to point blank range and 10° deflection. I saw strikes all over the E/A and pieces flew off the tail and fuselage. He caught fire at his left wing root. I broke off the attack and headed for the deck and home.’

The combat that lasted only a few minutes brought Lt. Col. Meyer the rare triumph of four kills. The drama, though, was not at its end. After his last kill, pretty much out of ammunition and his fuel reserves leaving much to be desired, he turned for home and dropped down to a lower altitude where he would be safer. At that point, he spotted two Bf 109s below him that glued them-

Lt. William ‘Flaps’ Fowler ended his combat tour on September 8th, 1944 with 3.5 enemy aircraft destroyed over 69 combat missions (Photo: 352nd Fighter Group Association, Peter Randall).
The E/A burst into flames, I broke into the sun, cleared my tail. Lt. William 'Flaps' Fowler ended his combat tour on September 8th, 1944 with 3.5 enemy aircraft destroyed over Bodney, England, early September 1944. Following their emergence the likes of Raymond H. Littge, William T. Whisner and, perhaps most importantly, George H. Preddy, the leading P-51 ace, Meyer's friend and colleague who he was not able to keep pace with after Preddy's tragic death over Christmas, 1944. As luck would have it, fate would not offer much opportunity to do just that. On December 31st, 1944, John Meyer was able to shoot down an Arado Ar 234 jet. Immediately the next morning, the final big show for John Meyer in the Second World War began. During Operation Bodenplatte, when one of the Luftwaffe targets was the 352nd FG's temporary home. Y-29 Ash in Belgium, John Meyer managed to shoot down an Fw 190 before he could even get his gear up after taking off. He subsequently dispersed with another Fw 190 and raised his Second World War score to the final tally of twenty-four. For this rare feat, he was awarded the Distinguished Service Cross. Eight days later, he was the victim of an accident, and although doctors were able to save his life, it spelled the end of his flying days at the end of the war. Up to that point, he took part in ca 200 combat missions lasting some 462 hours, and besides the twenty-four kills, he was also credited with the destruction of 13 enemy aircraft on the ground.

After the war, he completed his studies, earning a Bachelor's Degree in Political Geography. Postwar service with the US Army, later the USAF, was made up of various staff and admin functions up to August, 1950, when he was named Commanding Officer of the F-86 equipped 4th Fighter Wing. The unit was later moved to Korea, where John C. Meyer added another two kills to his total from 1943 - 1945. One was claimed on December 22nd, 1950 and the other on January 12th, 1951. Both victims were MiG-15s. After returning from Korea, he was taken on by the Air War College in Maxwell, where he would later remain as an instructor. In 1963, he was promoted to Major General and was subsequently given command of the 12th USAF. In 1967, this was followed by further promotion to Lieutenant General and function within the Strategic Air Command. He retired in July, 1974.

Among his military awards are, first and foremost, the Distinguished Service Cross with two Oak Leaf Clusters, Air Force Distinguished Service Medal with Oak Leaf Cluster, Silver Star with Oak Leaf Cluster, Legion of Merit, Distinguished Flying Cross with six Oak Leaf Clusters, Distinguished Service Medal with Oak Leaf Cluster, Silver Star with Oak Leaf Cluster, Legion of Merit, George Medal with Oak Leaf Clusters and the Croix de Guerre with Palm from both France and Belgium.

John C. Meyer died on December 2nd, 1975 in Los Angeles at the age of 56.
selves to his tail. For a short period of time, he set his throt-
tle to emergency boost and began climbing again at a rate
of 300m per minute. The enemy aircraft pursued him at
a distance of almost 300m, and still 100 to 120m from below.
Every now and again, they would be able to lift their noses
up and get off a few rounds, but to Meyer's luck, without
success. This unlikely group flew almost 180km between
Kassel and Bonn, and when they reached the Rhine, the
German pilots turned back.

Besides John C. Meyer, other members of the squadron
got a taste of success as well. Second Lt. Phanor B. Waters
shot down an Fw 190, 1Lt. Duerr H. Schuh another Fw 190
at a distance of 300m from below. Every now and again, they
would be able to lift their noses up and get off a few rounds,
but to Meyer's luck, without success. This unlikely group flew
almost 180km between Kassel and Bonn, and when they reached
the Rhine, the German pilots turned back.

The last of the 352nd FG squadrons, the 486th under
the leadership of Capt. Franklyn N. Greene, went through
something similar to the 487th Squadron. They went into
combat against a group of forming up German fighters at
around 1145h. However, over the course of jockeying for
position, the German fighters were lost in the sun and
Capt. Greene took his unit down to an altitude of 3,000m
where enemy contacts were reported. No enemy aircraft
were encountered, however, and so targets of opportunity
were sought out on the ground. After a short while, Gree-
ne's White Flight came across the rail yard at Herzberg am
Harz and the rail line heading east towards Herzberg, which
had several locomotives and rail cars on it. After a short
while, Greene and his Number 2, Lt. Cameron, destroyed
two locomotives. White '3', Lt. Howard R. Combs, attacked
a third locomotive. Whether he was hit from the ground or
if it was a miscalculated maneuver, we shall probably never
know. All that is known for certain is that Combs’ Mustang
pressed home his attack to the point where both pieces
of equipment ended up a massive fireball. Lt. Kenneth S.
Williams, who flew as Yellow 3, wrote: ‘... I observed a lone
Blue Nosed P-51 making an attack on a marshalling yard.
I immediately formed in his pattern and was following him
in on a pass at a string of eight or ten good cars. His pass
was very steep and his ship was about a sixty degree bank.
I observed many strikes on all of the cars and then this
ship hit the last three cars and exploded…'. Combs’ CO,
Capt. Greene, added: ‘... he was observed pilling into the
locomotive with his plane which blew up upon contact. His
action caused the destruction of the locomotive and three
goods cars. Five other cars were derailed.' Lt. Combs, who
according to German records, crashed at 1218h, was sub-
sequently buried in Herzberg. Other locomotives and cars
were destroyed by members of Yellow Flight, Capt. Miklaj-

Most pilots of the 352nd Fighter Group were engaged in
combat before they could meet up with the bombers that
were tasked with escorting to their targets at Brux in the
Sudetenland on the border of the former Czechoslova-
tia. That goal was eventually achieved by a single Flight
from the 328th FS to the tune of four Mustangs. They joined
up on the pair of 490h and 493rd Bomb Group combat bo-
xes at 1201h in the vicinity of Plauen, where the 3rd Bomb
Division split off. The bombers designated to hit Brux con-
tinued on in a southeast course to their waypoint at the Klas-
terec and Ohri (German name Klösterle/Eger), and then on
directly along the Ore Mountains to their target. Although
this took them into airspace where only a few minutes prior
there took place a monumental air battle that destroyed
over sixty aircraft shot down, the four 352nd FG Mustangs
would be enough. By that time, all was said and done over
the Ore Mountains...
Lt. Col. Meyer dated September 11th, 1944. (NARA)

A copy of the original combat report filed by John R. Bennett another Fw 190 with a Bf 109 probable and action caused the destruction of the locomotive and three locomotive with his plane which blew up upon contact. His . Combs' CO, destroyed four aircraft on the ground, and damaged ano -
directly along the Ore Mountains to their target. Although combat before they could meet up with the bombers that Blue Nosed P-51 making an attack on a marshalling yard.

I observed many strikes on all of the cars and then this happened, and Lt. James H. Forga was credited with three kills, another damaged (both '109s were credited to him as dam-
got a taste of success as well. Second Lt. Phanor B. Waters...

I immediately formed in his pattern and was following him to the end time of the mission with the return to Bodney was recorded a 1430h, giving it a time span of 4 hours and 30 minutes.

Although Fowler’s ‘Stardust’ brought John C. Meyer luck, he was glad to see his old airplane again. He did not, however, gain any more kills flying ‘Petie 2nd’. His next successful day came on November 21, 1944, when he would down three Fw 190s near Merseburg. That was while flying ‘Petie 3rd’, s/n 44-15041. Through to the end of the war, John C Meyer would accumulate 24 kills, making him the fourth most successful USAAF pilot in Europe.

Fowler’s ‘Stardust’ was reassigned to Lt. Jack C. Landrum, who renamed the P-51 ‘Moose’. On October 24th, 1944, during a ground attack mission at Wildeshausen, he was brought down by flak and killed.

Day of the Fighter Aces
For the given time frame, the unusual frequency of clashes between American and Luftwaffe aircraft on September 11th, 1944, gave rise to, among other things, the emergence or prosperity of several American fighter aces. Many pilots achieved two or more kills on that date. There were three confirmed kills credited to Lt. James H. Forga (352nd FG), Lt. Earl W. Fryer (55th FG), Lt. Donald E. McClish and Lt. Ethelbert M. Graham (both 339th FG), Lt. Henry W. Brown (355th FG), Capt. Benjamin H. King and Cyril W. Jones (both 359th FG) and Lt. William F. Rilson (364th FG). And, not to be outdone, there was a pair of pilots that would be credited with four confirmed kills. They were Lt. Frank R. Gerard (339th FG) and Lt. John C. Meyer of the 352nd FG.
One of our planned new item releases for February, 2021 includes an option for the Dornier Do17Z-5 coded “7T+HH” from Küstenfliegergruppe 606. The Z-5 version was equipped for operations over water and was mainly used by this unit. The crew of “7T+HH” experienced some extremely dramatic moments during an attack on Liverpool that proved fateful for most of them. In the article, I will also touch on the citizens of Great Britain and Malta. There were those that succumbed to the effects of war, while others, as we shall see, were born into it.

Navy Personnel in the Luftwaffe

Küstenfliegergruppe 606 was a unit within the German coastal air service. From the end of 1939, it specialized in patrol duties and attacks on surface vessels. The unit was equipped with the Do 17 and was based at Kiel-Holten. After being engaged against Denmark, Ki.Fl.Gr.606 was moved to the area of Brest in July, 1940, and from September was made subordinate from Navy to Luftflotte 3. The Gruppe was commanded by a former Navy officer, Major Joachim Hahn, who became a naval cadet already in 1923. The unit had put into practice having the crew command functions, and also those of the observer, performed by Naval Officers. In terms of navigation over water, combat tactics and target identification, this was deemed optimal. Over the course of the Battle of Britain, however, the main task of the unit became raids on British cities, attacks against harbors, bombings of military targets from heights of only a few tens of meters, and also target marking for other bombers. Combat missions usually took the crews to western areas of Great Britain. Kü.Fl.Gr.606 was in these tasks very successful and Hahn was awarded the Ritterkreuz in October, 1940 as a result. In 1942, he became Kommodore Kampfgeschwader 6, and he met his fate on June 3rd during an inspection tour, along with two other airmen, in a Messerschmitt Bf 108. Near Le Trepot, they were shot down by Spitfires from No. 401 Squadron RAF, flown by F./Lt D.E. Gillam and his wingmen Alois Vašátko and Josef Stehlík were experienced pilots, and they shot down a Junkers Ju 88 A-1, coded “M7+DK” of Küstenfliegergruppe 806 shortly after takeoff. The task of the Ju 88 was to bomb the Rootes aircraft factory at Speke. All three Hurricanes were actually hit by defensive fire coming from the German bomber. The bomber came down in the docks south of Liverpool. The crew commander, Lt. z. S. Herbert was killed by fire from the Hurricanes, and another three crewmen, Oblt. Helmuth Brückmann, Uffz. Helmuth Weth and Obfr. Horst Lehmann, were taken prisoner. The combat over the city grabbed a lot of attention, and the gates to the air base had to be shut, because massive crowds showed up, wanting to show their appreciation to the Czechoslovak unit. Eighteen crews from Kü.Fl.Gr.606 attacked British targets on the night of October 10th, thirteen of which were tasked with hitting the factory at Speke and the production facility of Rolls-Royce at Crewe. All of the bombers returned to their bases. However, the next event would play itself out differently.

During the evening hours of October 11th, 1940, six Do 17s from Hahn’s unit approached the area around Liverpool. One was headed for Birkenhead, and the other five were tasked with again hitting Speke and Crewe. Three of the aircraft were from 1. Staffel and three from 2. Staffel Kü.Fl.Gr.606.

Liverpool Raids

During the Second World War, the second most hit target in Great Britain was Liverpool. The primary target was the city harbor, which was among the biggest on the western shores of Great Britain. Liverpool and the surrounding area lost some 4,000 of its inhabitants between the summer of 1940 and the beginning of 1942. From one of the destroyed homes of Liverpool, paradoxically, came Hitler’s nephew, William Patrick Hitler, who served in the United States Navy during the Second World War.

From the beginning of October, 1940, one of the units defending Liverpool was No. 312 (Czechoslovak) Squadron, based at Speke, which currently is Liverpool’s John Lennon Airport. The first kill achieved by the squadron is probably also the quickest in the history of the RAF. F./Lt D.E. Gillam and his wingmen Alois Vašátko and Josef Stehlík were experienced pilots, and they shot down a Junkers Ju 88 A-1, coded “M7+DK” of Küstenfliegergruppe 806 shortly after takeoff. The task of the Ju 88 was to bomb the Rootes aircraft factory at Speke. All three Hurricanes were actually hit by defensive fire coming from the German bomber. The bomber came down in the docks south of Liverpool. The crew commander, Lt. z. S. Herbert was killed by fire from the Hurricanes, and another three crewmen, Oblt. Helmuth Brückmann, Uffz. Commanding officers of No. 312 Squadron
This time, the RAF was ready, and Spitfires from No. 611 (West Lancashire) Squadron were dispatched to the anticipated in-bound route just after 1730h. These aircraft came out of Ternhill. Berrie Heath and Tommy Williams of Yellow Section apparently shot down Dornier Do 17 Z-5 (W. Nr. 2772) “7T+EH” of 1. Staffel, crewed by Lt. zur See Jürgen von Krause, who ditched the aircraft in the sea. However, the German crew was able to hit Williams’ Spitfire. The damage was bad enough for Williams to contemplate bailing from his stricken aircraft, but he ultimately did make it back to his base. One member of the German crew was listed as missing, while the remaining ones were taken prisoner.

Pilots of Red Section, F/L W. J. Leather, P/O P. S. C. Pollard and P/O J. R. G. Sutton claimed the destruction of two bombers, the second of which was observed to have flames coming out of both engines, and two parachutes escaping from it. The first victim was likely Do 17 Z-5 (W. Nr. 3475) “7T+FK” of Oblt. Friedrich-Wilhelm Richter of 2. Staffel. None of his crew survived. The aircraft with both engines flaming was without a doubt Do 17 Z-5 (W. Nr. 2787) “7T+HH” of 1. Staffel, under the command of Oblt. z. S. Karl-Franz Heine.

F/O Heath, Sgt Angos and Sgt Pattison of Blue Section attacked another two Do 17s and came away with one probable and one damaged. During the fight, a lone Hurricane from No. 312 Squadron joined in. Kenneth Clifton Pattison chased one of the attackers in his Spitfire for some hundred miles to Kidderminster in Worcestershire County. Ultimately, he was hit by defensive fire from the bomber and suffered serious injuries in the ensuing crash at Cooksey Green, the results of which he did not survive.

The Czechoslovak unit dispatched two three ship flights of Hurricanes against the German bombers at just before 1800h. P/O Alois Vašátko and Sgt. Josef Keprt of Yellow Section lost contact with their British leader F/Lt Harry A. G. Comeford. So, they joined up on Red Section that included both commanders of the squadron, S/L Frank H. Tyson and S/L Ján Ambruš with P/O Josef Jaške. The five Hurricanes then attacked a lone Do 17 heading southward. After several hits, the left engine began belching smoke, but was soon lost in the clouds. Jaške’s Hurricane was badly damaged from return fire. The five fighters used up virtually all of their ammunition, and some even fired at point blank range. Harry Comeford, who’s Hurricane was observed by his colleagues in the Spitfires, also attacked one of the Dorniers, but other than the rear gunner got silent, no other result was observed. Unfortunately, the Intelligence Officer of the Czechoslovak unit, P/O F. S. Lamping, did not prepare victory claims on time. But from today perspective, it would appear that the end result was two damaged Do 17s.

Unfortunately, the Intelligence Officer of the Czechoslovak unit, P/O F. S. Lamping, did not prepare victory claims on time. But from today perspective, it would appear that the end result was two damaged Do 17s.
The next day, Saturday, October 12th, the Liverpool Echo newspaper reported on its third page a thorough accounting of the raid, its results and also air combats. The paper, on the same page, also reported that the Lennons had given birth to their son, John, three days prior.

**The Night Return of “7T+HH”**

The month of October, 1940, ended up as a tragic one for Kustenfliegergruppe 606. The unit lost over twenty airmen during the course of that month, which was more than the remaining months of the year combined. Heine’s crew lost two of its own during the raid on October 11th. They were last spotted by fighters from Yellow Section of No. 611 Squadron over their target. Two crewmembers bailed out of the aircraft, which had flames coming from both of its engines. It was assumed that the aircraft came down somewhere in the forests of Wales.

Radio operator Fw. Hans Staas was quickly captured at Martha-lyn (Mart of Llyn?) after bailing out. His colleague, Flight Engineer Uffz. Heinz Johannsen was not as lucky. As he jumped out of the aircraft, he was struck by a section of the horizontal tail and was killed before he hit the ground at Deiniolen.

Hans-August Johannsen came from Gettdorf (probably Gettorf) at Eckernförde, where he was born on October 1st, 1914. Immediately prior to the tragic flight, he celebrated his twenty-sixth birthday. From the records of this flight, we know that his target that night was Speke. The British buried him on October 15th in Prollheli in northern Wales, and through the Red Cross notified the Germans, who, in turn, passed the information on to his wife, Elly. Pilot Ofw. Wilhelm Hagen and Observer, and also crew commander, Oblt. zur See Heine, remained with the aircraft. As incredible as it may sound, they were able to put out both fires and land the aircraft on blown tires back at Brest! The damage to the aircraft was placed at 45%, which typically meant that it was deemed repairable.
On the same page, a report on the birth of John Lennon was published! Article on previous page: Liverpool Echo of October 12, 1940 with air raid description with details of Heine’s bomber with two burning engines.

The next day, Saturday, October 12th, the Liverpool Echo newspaper reported on its third page a thorough accounting of the raid, its results and also air combats. The paper, on the same page, also reported that the Lennons had given birth to their son, John, three days prior.

The Night Return of “7T + HH”

The month of October, 1940, ended up as a tragic one for Kustenfliegergruppe 606. The unit lost over twenty airmen during the course of that month, which was more than the remaining months of the year combined. Heine’s crew lost two of its own during the raid on October 11th. They were last spotted by fighters from Yellow Section of No. 611 Squadron over their target. Two crew members bailed out of the aircraft, which had flames coming from both of its engines. It was assumed that the aircraft came down somewhere in the forests of Wales.

Wilhelm Hagen

There is not currently all that much known about the details of Wilhelm Hagen’s service with Küstenfliegergruppe 606, but he did receive not only the Ehrenpokal for “actions above and beyond the call of duty” in air combat, but also the Deutsches Kreuz in Gold (January 30th, 1942). He is one of five flyers from this unit that are known to have received this award. This speaks to the fact that this was an extraordinary pilot, which he proved during his July flight over Liverpool. Towards the end of 1941, there were discussions about whether or not to return Major Hahn’s unit to the Kriegsmarine, or to leave it as a Luftwaffe unit. Ultimately, the decision made was consistent with the latter. The Luftwaffe also considered rearming Küstenfliegergruppe with the He 111. Hahn was adamantly opposed to the idea, and the naval commander supported him on this. In February, 1941, his unit began converging to the Ju 88. This was accompanied by a new designation, Kampfgruppe (Bomb Group) 606, but in subsequent loss reports, the unit was referred to as it was prior to the new designation.

In October, 1940, Hahn’s unit went back to patrolling over water and attacking surface vessels. For example, on the 17th of that month, they recorded a hit against an enemy destroyer during a clash of German and British ships. The tasks undertaken by the unit would remain basically the same through most of 1941, by which time the unit had sunk several tens of thousands of tons of transport shipping.

At the end of November, 1941, KG. 606 was moved to Catania on the island of Sicily. The date of December 7th was significant for two direct hits against enemy destroyer and a sunk merchant vessel northwest of Benghaz.

From the beginning of 1942, combat operations often took KG. 606 over Malta, and several of her crews were shot down by Hurricanes and Beaufighters or antiaircraft units. Among the tasks of the German crews was also the dropping of SD-2 ‘Butterfly’ bombs, a weapon that was hell on the civilian population of Malta.

Sfw. Hagen failed to return from a raid on an ‘unsinkable’ aircraft carrier. This was on April 19th, 1942, interestingly enough, on a day when the RAF was not able to put up a single fighter against the bombers. Over 270 bombers in some ten waves dropped over 430 tons of bombs on Malta. The main target of the raid were antiaircraft batteries, which killed several tens of men, but also killed were many inhabitants and the fatalities totaled some seventy people.

The defenders brought down two Ju 88s. The first was Ju 88 A-4 (W. Nr. 3641) “3Z+KN” of 5./KG 77 of Lt. Horst Rosenfeldt. The second aircraft lost was Ju 88 A-4 (W. Nr. 1526) “7T+BH” of 1./Kü.Fl.Gr. 606. Hagen’s entire crew went missing, including observer Fw. Heinz Uecker, Radio Operator Ofw. Ludwig Bachmann and Flight Engineer Ernst Althammer. The defenders reported seeing a bomber take a direct hit and disintegrate in midair over Grand Harbour. Willi Hagen was posthumously promoted to Oberleutnant.

Karl-Franz Heine

The future pilot and submarine commander was born on October 30th, 1915 in Kiel. He joined the military in April, 1934, and five years later, he achieved the rank of Oberleutnant zur See and was assigned as an observer in the aerial operations. After leaving Küstenfliegergruppe 606, he was trained in the submarine force, and in March, 1942, he was promoted to Kapitänleutnant, followed by being given command of U-303 (Type VIIc) in July. He undertook training with his crew through to the end of 1942, and over the first half of 1943, they undertook two patrols. On February 23rd, 1943, he managed to sink the American merchant vessel ‘Expositor’ (Convoy ON-166), but it came down to being a mercy kill. Initially, the ship was struck by U-606, and most of the crew were rescued by the corvette HMCS Trillium (K 172), which tried unsuccessfully to sink the damaged ship.

As opposed to a list of other subs, Heine’s crew recorded no loss of personnel during tours on non-combat duty. That would, however, change on May 21st, 1943, when U-303 was on a training exercise south of Toulon. She got into the sights of the British submarine HMS Sickie, commanded by Lt. J. R. Drummond, DSO, RN. The resulting explosion and sinking, which lasted somewhere around a half a minute, took the lives of twenty crew members, but another 28, including Heine, were rescued, which was a bit of a miracle.

Heine took command of U-403 (Type VIIc) from Kptlt. Heinz-Ehliert Clausen in mid June, 1943, and took the sub southwest to into the Atlantic a month later. In the middle of the ocean, he met up with U-43 (Type X) on July 30th to take on fuel. Unfortunately, convoy GU8-10, which included the escort Carrier USS Santee, was passing through the area. Both of the subs were attacked first by LTJG Edward van Wanken with a Wildcat, followed by an Avenger crewed by LTJG Robert F. Richmond. U-43 was hit with a Mk.24 FIDO torpedo, and the entire crew of Oblt. Hans-Joachim Schwantke was lost. U-403 was able to escape both depth charges and a second torpedo. Heine then took the sub southeast, on a heading towards the coast of Africa. The voyage ended at Dakar. First, the sub was attacked on August 17, by a No. 200 Squadron RAF, Hudson flown by F/O Philip Horbat, which was escorting Convoy SL135. Twelve seconds after submerging, the British dropped four depth charges, after which an oil slick was observed. The convoy escort duty was then taken over by a Sunderland of another unit, while another two No.200 Squadron Hudsons joined in the search for U-403. The surface of the ocean yielded further oil slicks.

The next day, U-403 was sunk by a Wellington Mk.XIII (H2697) of 2. Flottille de Bombardement of the French naval air force. The crew of Lieutenant de vaisseau Ernest Bigo with pilot Premier-maitre Chevant dropped six depth charges on the sub. All 49 crewmen, including Karl-Franz Heine, perished.
1711, Lt. (jg) Edward VanVranken, A-V(N), USNR, flying F4F-4 #2, sighted two surfaced submarines, bearing 030°T, distance 60 miles from the ship, in column on course 200°T, speed 12 knots, in latitude 34°54’N, longitude 35°01’W. One larger submarine may have been a refueller. Lt. (jg) VanVranken attacked by strafing first the smaller and then the larger submarine. Both submarines commenced submerging as a result of the strafing attack. Lt. (jg) VanVranken was followed by Lt. (jg) Robert F. Richmond, A-V(N), USNR, pilot and McCONNELL, R. W., ARM1c, U. S. Navy, and TARSCIIVIA, E. P., AMM3c, U. S. Navy, crew, in TEF-1 #13 who attacked the larger submarine, releasing two Mark 224 hydrostatic fuse set to detonate at 25 feet while the submarine was still surfaced. Bombs struck the water fifty feet over and exploded three seconds later; submarine submerged, leaving oil, evidence of damage. Lt. (jg) Richmond then attacked the smaller submarine, releasing a Mark 24 mine 1000 feet ahead and 600 feet to port side of the swirl seventy seconds after submergence. 120 seconds later boiling in water and explosion observed, followed by small amount of debris and a small amount of oil. There were no survivors. Large chunks of cork-like material observed beneath the surface and green discoloration in the immediate area of the explosion. Sighting and attack reported by voice radio at 1726. Strafing attacks were opposed by enemy gun fire. Camera gun and other photographs obtained.

P7881, S/Ldr. Michael L. Robinson, CO of No.609 Squadron, RAF Biggin Hill, Great Britain, April 1941

The Spitfire Mk.IIa P7881 carries type B camouflage, although it has an odd serial number. The Rotol spinner is sky-coloured with a red stripe. There is a black B on the lower engine cover and a command pennant of the No.609 Squadron commander is on both sides of the fuselage. The code letters are made in Medium Sea Gray and PR-B are the initials of the base commander, Group Captain Philip Reginald Barwell, who occasionally flew as wingman of "Sailor" Malan. Barwell was accidentally shot down by a Spitfire pilot on July 1st, 1942 above sea, and his body was found on the French coast. Squadron Leader Michael Lister Robinson of No. 609 Squadron recorded with P7881 several victories in May and June 1941. In total, he scored 16 victories, 6 of them in the Battle of Britain. He later led Biggin Hill Wing and Tangmere Wing. He was killed on April 10th, 1942, fighting the Focke-Wulfs of II./JG 26. Along with him died his French friend and wingman Maurice P.C. Choron.

P8387, Sgt. Stanislaw Blok, No.315 (Polish) Squadron, RAF Northolt, Great Britain, August 1941

Spitfire Mk.IIa P8387 carries camouflage type A. De Havilland spinner is in Sky color. Nickname BARTY is painted on the fuselage and the code letter H is used for the female name Halina. Spitfire served with No.611 Squadron since May 1941, but in the same month, Canadian ace Alfred Keith Ogilvie DFC of No.609 Squadron, used it to shoot down a Bf 109. In July 1941 the machine was taken over by the Polish No.308 Sqn where the national insignia was added on both sides of the cowling. In July 1941 Polish colleagues from the No.315 Squadron took over P8387. Later on, the machine was converted to the Mk.V version and was used by No.266, No.123 Sqn and 58.OTU. In July 1942, it was written off after a collision with another Spitfire. P8387 flew 872 hours and 30 minutes. Sgt. Stanislaw "Charlie" Blok, among others, flew with this Spitfire with No.315 Squadron. During World War Two, he recorded 5 aerial victories.
P8038, Fl/Lt. Brendan E.F. Finucane DFC, No.452 Squadron RAAF, RAF Kenley, Great Britain, August 1941

Spitfire Mk.IIa P8038 is painted in type A camouflage, although it has an even serial number. The Rotol spinner is in Sky color. Green shamrock with the letters BF on both sides of the fuselage is the personal emblem of Irish fighter ace "Paddy" Finucane, who claimed a total of 26 individual victories. He was transferred to Australian No.452 Sqn in April 1941 after serving with No.65 Sqn. With the P8038, he claimed 4 victories and 1 probable. In January 1942 he became commander of No.602 Sqn. At the end of June he took over command of the Hornchurch Wing. He died on July 15th, 1942, in an emergency landing at sea after his plane was hit by flak. Australians Sgt. Ian Milne and Sgt. Richard Gazzard also flew the P8038 with No.452 Sqn. Spitfire was originally used by the Polish No.303 Sqn later on was also briefly used by Czechoslovaks in No.313 Sqn. After conversion to Mk.Vb version, it was used by the No.611 and Norwegian No.332 Squadron.

P8081, Fl/Lt. Tomáš Vybiíral, No.312 (Czechoslovak) Squadron, RAF Ayr, Great Britain, November 1941

Spitfire Mk.IIa P8081 was painted in scheme type A. From both sides of the fuselage there is a light gray inscription GARFIELD WESTON IV. It is one of 16 aircraft funded by Willard Garfield Weston, Canadian member of the House of Commons. This philanthropist was owner of the Allied Bakeries. He also helped to create a canteen system in the London Underground during the Blitz bombing offensive. P8081 first served with the No.222 Sqn, where Sgt. Burgess used it to damage a Ju 88 in April 1941. Later on the Spitfire was assigned to Australian No.452 Sqn for about a month and from October till December it was used by Czechoslovak No.312 Sqn. A number of pilots flew with P8081, including F/Sgt Václav Šlouf. On November 17th, it was damaged by F/Lt. Tomáš Vybiíral after landing in poor visibility. This pilot scored 7 victories in the French Air Force and achieved the rank of Wing Commander in the RAF. After the war he emigrated from Czechoslovakia and joined the anti-communist resistance.

P7840, No.340 (Free French) Squadron, RAF Ayr, Great Britain, January 1942

Spitfire Mk.IIa P7840 is painted in scheme type B. Rotol spinner is in Sky color. On both sides of the bow is a blue or dull red Lorraine cross in a white shield. Below the canopy is a light grey inscription related to aircraft funding. Belfast Telegraph founded in North Ireland the Spitfire Fund during the Battle of Britain, where its readers raised enough funds to buy 17 Spitfires. A total of 12 of their airmen were killed in combat. The P7840 was the 13th machine of the Fund. The upper part of the inscription refers to the song of the same name by the Irish composer Percy French. This Spitfire served with the No.64 Sqn from February 1941 and was taken over in December by No.340 Sqn. Free French used it until February 1942, when they switched to Spitfires Mk.V. This unit conducted 7,845 combat flights, shot down 37 aircraft and destroyed more than 500 ground targets. A total of 30 of pilots were killed and six were captured. After the war, unit received the Ordre de la Libération.

Nieuport Ni-17; N.1662; Paul Tarascon, Escadrille N.62, Chipilly, France, November 1916

Paul Albert Pierre Tarascon was a formidable fighter pilot not only because of his record of twelve aerial victories (plus ten probable), but also because of his perseverance. He lost his right foot in an aerial accident during his flying courses in 1911, flying Blériot XI. He finished the training though and despite his handicap he was accepted to the air corps at the outbreak of World War One. His colleagues called him “l’as la jambe de bois” (the ace with the wooden leg) later. He served in the military aviation school as instructor from January 1915, but was sent to the combat unit on October 6, 1915 upon his own request, and joined the Escadrille N.31. After short spell with N.3 he joined N.62 on his own request together with six other pilots in May 1916. Shortly afterwards he acted as interim commanding officer from July 11 till the end of the month, scoring his first victory during this time (on July 15, 1916). Tarascon than started naming his mounts with the Zigomar name. The Zigomar was the name of fictional criminal, who was terrorising France and the Europe with his accomplices. Tarascon flew this Nieuport 17 in the autumn 1916. The aircraft was painted in factory silvery paint coat, the red painting of the nose was heavily worn out. Paul Tarascon participated in the resistance against the German occupation During the World War II. He died at the age of 94 on June 11, 1977.

Nieuport Ni-17; N.1490; Charles Nungesser, Escadrille N.124, France, Bar-le-duc - Béhonne, France, July 1916

Charles Nungesser was one of the most flamboyant French aces of Great War and, together with his good friend Jean Navarre, also the bogeyman for Paris pubs, clubs, and brothels. His apetite for wine, women and dangerous adventures made him popular (apart from his senior officers), while his flying capabilities, bravery and instincts made him the third highest scoring French ace of WWI with 43 victories. Volunteering for the French Army on May 18, 1914, he was reassigned to the air corps and underwent a pilot training. From April 1915 he flew 53 bombing missions with Escadrille VB.106. In November 1915, after necessary training on Nieuports he moved to Escadrille N.65 staff. After one of his many wounds, he suffered during the war, he was temporarily assigned to the N.124 Escadrille La Fayette in the period of July 12 to August 15, 1916. Nungesser was eager to fly before his wound caused by shrapnel fully hailed and the N.124 was located close to the hospital and so the physicians could take daily care of him. Nungesser’s aircraft carried the personal marking in the form of black heart with skull and coffin between two funeral candles were painted and his camouflaged Ni-17 from La Fayette stint was no exception. Nungesser kept on flying and risky ventures after the war, but on May 8, 1927 disappeared together with Francois Coli during the attempt to cross the Atlantic flying the Levasseur PL 8 biplane.
Jean Matton was a cavalryman at the outbreak of World War I, but reassigned to the air corps at the end of 1915 he underwent pilot training at the military aviation school of Pau. He finished his training on January 14, 1916, sent to Escadrille N.57, but detached to MF20 (MF denoting the use of Maurice Farman aircraft) for the period between 2nd quarter of 1916 until July 23, 1916. He scored his maiden victory shared with Georges Lachmann and Georges Flachaire five days later as the regular member of N.57. The victim was an Albatros C.I. On October 8, 1916 he took command of the Escadrille and led the unit until his death on September 10, 1917. Matton continued to score during this period with the eighth and ninth (and his last) one shared with Armand de Turenne on July 6, 1917. In the late afternoon on September 10, 1917, he led the unit flying his SPAD VII (N.2416) for the aerial patrol. Near the Couckelaere (Belgium) the French pilots encountered combat with Jasta 7 pilots. Jean Matton fell victim to one of them at 19.05, it is believed, his fatal opponent was German ace Carl Jacobs, for whom it was 7th of his 48 victories. Nieuport flown by Matton during the summer of 1916 was in green and brown camouflage, with the undersides probably in light blue colour (another option is factory silver coat). The cock’s head, the unit’s symbol, was painted without usual circle around it.
Nine victories French ace Mathieu Tenant de la Tour was member of famous „Bande noire” (Black Band) formed in June 1916 by four friends. Apart of him the members were Alfred Hertaux (21 victories), Albert Deullin (20 victories) and the most famous one – Georges Guynemer (53 victories). All had black triangle on the upper side of the fuselage painted. Although de la Tour began his military service with cavalry, he changed for air corps and received his military pilot license on May 6, 1915. He continued with advanced combat training, during which he survived an accident on October 30, 1915. He was assigned to Escadrille N.57 on December 29, 1915. His first aerial victory was over observation balloon on January 25, 1916. After wounded in action on April 25, 1916 he joined Escadrille N.3, the famous Les Cigognes, where he started flying Nieuports. During the period between July and September 1916 de la Tour shot down five aircraft and another balloon. After being promoted to Lieutenant, he changed the unit to command the Escadrille N.26 where he scored his last victory. On December 17, 1917, de la Tour conducted an aerobatics exhibition in Auchel (Pas-de-Calais). He lost control of his SPAD XIII and died in fatal accident. His Ni-17 from the summer 1916 sported the famous stork on the fuselage, which might be full red, or red with black wing feathers.

Kampfgeschwader 3 was formed on May 1st, 1939 in Fürstenwalde in Brandenburg, with her II. Gruppe at the time flying from nearby Magdeburg. All of the subordinate units were equipped with the Do 17Z, and at the end of May, Stab, II. and III. Gruppe were relocated to Heiligenbeil, located in East Prussia. Training of crews continued there until the invasion of Poland. Both Gruppe took part in this attack. The II. Gruppe, with its Do 17Zs, took part not only in the invasion of Poland, but also in the Battle of France and the subsequent Battle of Britain. The unit converted on to the more modern Ju 88 in the spring of 1941. Do 17Z bombers left the production facility camouflaged on the upper surfaces in RLM 70 and 71, with the lower surfaces sprayed RLM 65. Aircraft of the II. Gruppe carried the unit marking below the cockpit, a scythe in a white circle. The 5th Staffel marking of a stylized bird carrying a bomb was carried on the engine cowls.

The last action to be undertaken during the Battle of Britain by the crew commanded by Fw. Willi Effmert (who was the pilot, bombardier Uffz. Ritzel, radio operator Uffz. Reinhardt and observer Gefr. Huhn) was an attack on the base at Debden and Hornchurch, planned for August 26th, 1940. During the raid, this aircraft was shot down by a Defiant from No.264 Squadron, RAF. Only the pilot and the bombardier survived. The wreck of this aircraft was discovered in 2008, not far from the coast of the County of Kent. It was raised in 2013 and is currently on display at the RAF museum in Cosford. The unit marking carried under the cockpit of aircraft of the III. Gruppe were playing cards and the Stab aircraft all the card colours, and aircraft of the 7. Staffel carried clubs.
Do 17Z-2, WNr. 2555, 8./KG 76, Cormeilles-en-Vixen, France, September 1940

On August 15th, 1940, at ten minutes after noon, this aircraft was shot down by Spitfires from No.609 Squadron flown by F/O Dundas and F/O Tobin. The pilot of the Dornier bumbled in near Castle Farm at Shoreham. Outside of observer Fw. Schmid, who was fatally wounded in the intercept, the crew was taken prisoner. Do 17Zs of the 8. Staffel KG 76 carried the unit insignia under the cockpit, a red shield with three white bomber silhouettes and a bomb in the background. Other identifying markings were the red fuselage band behind the wing and red spinner tips. The aircraft letter ‘F’ in red (the colour of the 8.Staffel within the III.Gruppe) was edged in white. White, and in the case of KG 76, pink, bands, used during the Battle of Britain as a formation flying aid, were painted on the top surface of the left wing and on the outside surfaces of the fin and rudders.

Do 17Z-5, WNr. 2787, 1./KGr. 606, Lannion, France, October 1940

The Do 17Z-5 was equipped with floatation cells in the nose in order to give the crew more time to escape the aircraft in cases of setting down on water. These aircraft were issued to Küstenfliegergruppe 606 as a matter of priority, a unit that specialized in attacking surface vessels. This aircraft was heavily damaged on October 11th, 1940 during an attack on Liverpool, when No.611 Squadron Spitfires lit up both of its engines. Two members of the crew (the radiooperator and mechanic) bailed out of the aircraft, while the pilot and observer were able to actually make to France and make an emergency landing near Brest. The mechanic, Uffz. Johansen, was struck by the tail surfaces of the aircraft and died before he hit the ground after bailing out over England. The radio operator reached the ground unscathed near Mart of Llyn and was captured. After a change in tactics that involved the bombing of English cities under the cover of darkness, the undersides of the aircraft, as well as the white portions of the balkenkreuz and swastikas on other surfaces, were painted black, which was the case here as well. The unit emblem appears below the cockpit.
Do 17Z-2, 3./KG 2, Athens-Tatoi, Greece, May 1941

One of the bomber units taking part in the Balkans campaign under Operation Marita (the attack on Greece) was Kampfgeschwader 2. This unit’s Stab, I. and III. Gruppe (the contribution of II. Gruppe was largely symbolic) attacked from the Bulgarian airfield at Plovdiv-Krumovo, and after the occupation of Macedonia, KG 2 moved to Thessaloniki, and by the very end of the actions against Greece, the unit operated from Tatoi airfield in Athens. Aircraft that took part in Operation Marita carried RLM 04 engine cowls and control surfaces in the tail. The unit insignia was carried under the cockpit.

Do 17Z, 7./KG 3, Wjazma, Soviet Union, Winter 1941

Over the course of the winter months of the war against the Soviets, fighters and bombers alike received applications of temporary white paint on their upper surfaces in an effort to better conceal them from the enemy when on the ground or in the air. These paints were applied at unit level and with whatever method that was possible with no real preparation, and the paint tended to wear away very quickly under the traffic of the groundcrews, and the adverse weather conditions played a role as well. It was the same with bombers of the 7. Staffel KG 3, the last unit conducting operational flights with the by-then obsolete Do 17Z. Below the temporary, washable white paint, the original camouflage scheme consisting of RLM 70/71 was visible on the upper surfaces, and the lower ones were sprayed RLM 65. Service on the Eastern Front was signified by the yellow fuselage band ahead of the tail surfaces and the yellow lower wingtips.
Do 17Z-2, 10./ZG 26, Castel Benito, Libya, 1941

The Do 17Z, used by several Luftwaffe bomber units in the early phases of the Second World War, took part in every conflict undertaken by Nazi Germany. North Africa was no exception. Here, however, the use of the type was largely symbolic, and a few served with the 10. Staffel Zerstörgeschwader 26, a unit flying the twin-engined Bf 110. This particular aircraft was discovered by advancing British troops at Castel Benito in Libya. Aircraft used in North Africa were camouflaged to suit the environment with upper and side surfaces painted RLM 79 with squiggle patterns of RLM 80, while the lower surfaces were in RLM 78. It is not clear from photographs if this aircraft had the RLM 80 squiggle pattern applied. As with other aircraft on the southern front, this plane carried a white fuselage band ahead of the tail surfaces and white lower wingtips.

Do 17Z-3, fänr. Olli Kepsu, 2/LeLv 46, Linnunniemi landing ground, Finland, February 1942

Finnish bomber units suffered combat losses through the summer and fall of 1941 that they could not replace from local sources. Help came in the form of fifteen Do 17Z aircraft gifted by the Luftwaffe, which was in the process of phasing the type out of service. These aircraft entered Finnish inventory during January and February 1942, and began operational flights from April with LLv 46. Five of the Finnish airframes survived World War Two combat and the last was retired on October 1st, 1952. One of them was coded DN-55, which also was the last Finnish Air Force aircraft to fly a Second World War mission, when it photographed German units on April 4th, 1945, in the vicinity of Kilpisjärvi. The Dorniers reached the Finnish units at the beginning of 1942 camouflaged in RLM 70/71/65, in the same scheme as they were flown by the Luftwaffe. The Finns also used temporary white paint as a winter camouflage, and in the case of DN-55, this paint was applied over the RLM 71 fields.

632167
MG 81Z gun
1/32

Brassin set - German WW2 MG 81Z gun in 1/32 scale. Set consists of 1 gun.

Set contains:
- resin: 2 parts,
- decals: no,
- photo-etched details: yes,
- painting mask: no.

648604
Bf 110G-4 gun muzzles
1/48 Eduard

Brassin set - the gun muzzles for Bf 110G-4 in 1/48 scale.
Recommended kit: Eduard

Set contains:
- resin: 7 parts,
- decals: no,
- photo-etched details: yes,
- painting mask: no.
Brassin set - the undercarriage wheels for Do 17Z in 1/48 scale. The set consists of the main wheels and a tailwheel. Easy to assemble, replaces plastic parts.

Recommended kit: Eduard / ICM

Set contains:
- resin: 5 parts,
- decals: no,
- photo-etched details: no,
- painting mask: yes.

---

Brassin set - the obliquely mounted guns for Bf 110G-4 in 1/48 scale. Ammo magazines included.

Recommended kit: Eduard

Set contains:
- resin: 8 parts,
- decals: no,
- photo-etched details: no,
- painting mask: no.

---

648608
Do 17Z wheels
1/48 Eduard/ICM

Brassin set - the undercarriage wheels for Do 17Z in 1/48 scale. The set consists of the main wheels and a tailwheel. Easy to assemble, replaces plastic parts.

Recommended kit: Eduard / ICM

Set contains:
- resin: 5 parts,
- decals: no,
- photo-etched details: no,
- painting mask: yes.
648609
Do 17Z bomber guns
1/48 Eduard/ICM

Brassin set - the guns for Do 17Z bomber in 1/48 scale. The set consists of 6 guns. Easy to assemble, replaces plastic parts.
Recommended kit: Eduard / ICM

Set contains:
- resin: 32 parts,
- decals: no,
- photo-etched details: yes,
- painting mask: no.

648611
Spitfire Mk.IIb gun bays
1/48 Eduard

Brassin set - the gun bays for Spitfire Mk.IIb in 1/48 scale. The set consists of gunbays for both wings.
Recommended kit: Eduard

Set contains:
- resin: 28 parts,
- decals: no,
- photo-etched details: yes,
- painting mask: no.

Spitfire Mk.IIa
1/48

#3DL48007 Spitfire Mk.II SPACE (3D Decal)
Spitfire Mk.Ia P8081 was painted in scheme type A. From both sides of the fuselage there is a light gray inscription GARFIELD WESTON IV. It is one of 16 aircraft funded by Willard Garfield Weston, Canadian member of the House of Commons. This philanthropist was owner of the Allied Bakeries. He also helped to create a canteen system in the London Underground during the Blitz bombing offensive. P8081 first served with the No.222 Sqn, where Sgt. Burgess used it to damage a Ju 88 in April 1941. Later on the Spitfire was assigned to Australian No.452 Sqn for about a month and from October till December it was used by Czechoslovak No.312 Sqn. A number of pilots flew with P8081, including F/Sgt Václav Šlouf. On November 17th, it was damaged by F/Lt. Tomáš Vybíral after landing in poor visibility. This pilot scored 7 victories in the French Air Force and achieved the rank of Wing Commander in the RAF. After the war he emigrated from Czechoslovakia and joined the anti-communist resistance.

F-6D-10, 44-14699, Lt. Clifford S. Slonneger, 109th TRS, 67th TRG, 9th AF, Gosselies, Belgium, 1945

67th TRG history begins in September 1941 when it was formed in Louisiana as the Observation Group and its first task were anti-submarine patrols alongside the United States East Coast which it carried out until March 1942. Transfer to the Great Britain followed in August 1942, where the training continued. In October 1943 it was ordered under the 9th Air Force command, renamed to 67th Tactical Reconnaissance Group and 107th and 109th TRS under its command were equipped with F-6 Mustang. 109th TRS, in which ranks Lt. Slonneger flew 54 missions, operated this type on photo-reconnaissance sorties until the end of hostilities. After the War, the unit was transferred back to the United States in August 1945 and disbanded in March the following year. F-6D from this unit often had the oval window on the side of the fuselage covered. It is highly probable that it was the case of the aircraft named Shady Lady.

INFO Eduard - February 2021
F-6D-15, 44-14874, Lt. John E. Jacoby, 82nd TRS, 71st TRG, 5th AF, Johnson Field, Japan, September 1945

Since November 1944, 82nd Tactical Reconnaissance Squadron, within 71st TRG, participated in reconnaissance missions over Philippines island of Luzon, ground units’ support, photographing and bombing of the airports on Formosa and China. Its next base became the island of Ie shima from where they were flying sorties over the Japanese island of Kyushu. Since the deployment over the Philippines until the middle of June 1945 the unit was commanded by Capt. William Shomo, probably the most famous F-6D pilot. At the end of hostilities, the unit was transferred to Irumagawa airbase on the Tokyo outskirts. The squadron deployed aircraft nr.54 from the very beginning of the combat on Philippines and she remained in the unit inventory even after the end of War and served as a part of occupying forces on Japanese territory. The aircraft appearance during its service changed significantly. At the beginning of its service the aircraft carried only number 54 on the vertical tail surface, later the black stripes were added to the fuselage and wings, anti-glare panel was repainted black and the propeller spinner sported several versions of the coloration. Inscriptions on the fuselage nose are also documented in two different layouts. There is an 82nd TRS marking on the port side of the fuselage, most probably applied after the end of War.
Built by Zdeněk Müller

85a Squadriglia, Albania, late 1918

The 85a Squadriglia was formed on September 25th, 1917 and fought up to the end of the First World War on the Albanian front. The first equipment of the unit was composed of French Nieuport fighters, which were replaced the following year by Hanriot HD.Is. The unit was disbanded in October 1919. As with the pilots of other nationalities, the Italians had a tendency to decorate their aircraft. A rendition of playing cards was not limited to aircraft of the 85a Squadriglia, but have also been seen on aircraft of Tenente Baracchini of the 76a Squadriglia.

Fokker D.VII (OAW), 20xx/18, Jasta 4, Airfield “La Ferme Puisieux” near Laon, France, August 1918
OK-AKP
Z-37A s/n 12-18, manufactured and registered to Slov Air in the Slovak Air Register in 1971. After many changes in ownership, the aircraft is currently owned by Air Jihlava Servise Ltd. The No. 310 Squadron RAF badge on the engine cowling and the kill markings under the cockpit are consistent with these items painted on Spitfire Mk.XVI TE184, when it was flown as DU-N. OK-AKP was flown with tiger motif fuel tanks. The plane was stricken off charge in 2018 and became a source for spare parts.

OK-NJB
Z-37A s/n 25-02 was registered on August 2nd, 1983 with Slov-Air Division 05 Brno. From January 28th, 1993, it was owned by Reas a.s. in Brno, then from November 28th, 2000 by Radek Jež, flown by Bedřich Vávra, from August 22nd, 2001 by DARA Air s.r.o., and from March 22nd, 2006 by Air Jihlava Service, s.r.o. Airframe OK-NJB wore tiger stripes on its tail going into an overhaul in 2012, and on the engine cowling thereafter.

OK-HJH
Z-37A, with the serial number 23-11 was manufactured in 1977, and in May of that year, it was registered to Slov-Air in Prague, where it served with red elements on the wing. The mouth and caterpillar was added in 1990 at the airfield in Rakovnik. Currently, it serves with the company AgroAir/ka s.r.o. and is painted overall yellow.

RA-1349G
This aircraft was built in 1975 and delivered to East Germany, carrying the registration DDR-SVW. In 1990, it was redesignated as D-SEVW. It found its way to Russia in 2010, with the registration RA-1349G coming in 2015. On September 12th, 2018, fifty-two-year-old Vladimir Zelenov was crop dusting with this aircraft when it crashed near the village of Tagay in the Ulyanovsk region. Unfortunately, the pilot did not survive the crash.
P-39Q Airacobra

Cat. No. 8470

P-39Q-5, 42-20351, Lt. William A. Shomo, 82nd TRS, 71st TRG, 5th AF, Dobodura, New Guinea, March 1944

- Decals for 8 marking options
- Eduard Brassin seats and wheels
- Eduard photo-etched accessories and painting mask
- 3 Desert Babe posters in size 45 x 32 cm

200 pcs ONLY @ www.eduard.com
Psychology of a modeller

From time to time, I say to myself that it could be interesting to see a well-made psychological analysis of the animal known as the „scale modeller“. I have never seen such a work before, and I have no ability to create it. So, all I can do is to look for simple definitions and traits that are able to describe the modeller.

When I sometimes read modelling forums, reviews, and the writings of critics etc...or when I get to listen to modeller’s discussions, I have the feeling that one of most significant characteristics of a modeller is to „know everything“ necessary to press his own opinion and perspective. Sometimes, it appears that the only good modeller is someone who has a definite opinion on what constitutes an error or mistake made by his peers/fellow modeller. This isn’t just restricted to other modeller’s work, but also about the numerous manufacturers of plastic kits and accessories (apparently, it is a well-known fact that manufacturers are the hobby’s own worst enemy!). Anyway, I believe it would be unfair to tarnish all modellers by this giving them this label. More describe the modeller. and understand the unfathomable. Another glue. I try to look at these things tolerantly and with respect. In addition, when I became part of the Eduard team more than 13 years ago, I fell straight back into it. Of course, I found myself on the other side of the barricade, so to speak. I started to deal with scale modeling professionally, but not as a modeller. Make no mistake, this also applies to most of Eduard’s creative personalities. Real „practicing modellers“ are usually in the oppressed minority among the employees of a scale plastic kit company. Apart from lack of time, a simple thing such as being unsure of my own abilities, prevented me from returning to this hobby. This was because some real gems passed through my hands from our cooperating modellers and builders of presentation models, the results of which I believed I could never hope to achieve myself. But in the end, what really matters is the joy which modelling brings to the individual; the joy of what we create. I didn’t expect it, but my two sons, who, under the influence of a non-modelling dad, fell in love with model-making and planes. This brought me to timidly put my own head above the parapet, and to „cut the plastic“ again.

At the same time, I remember the slogan of a British modelling club, which once fascinated me in Telford a few years ago, and which is not only a perfect antidote to the hardcore modelling individual that I wrote about above, but which is also an expression that the general modeller is a creature that has a sense of humor and the ability to look at himself from the outside. I think this slogan says what I mean much better than all of my previous chatter, even though you have my respect for reading this far:

WE GLUE WHAT WE LIKE. WE LIKE WHAT WE GLUE!

Jan Zdiarský

I want my husband to pay more attention to me. Do you have any perfume that smells like model glue?
